Developments in Animal Health Surveillance, volume II Bernard J. Phiri, Marta Hernandez-Jover, Arata Hidano, Marta Martinez Aviles, 2024-12-13 Animal health surveillance aims to facilitate early detection of outbreaks disease control animal welfare management protection of public health planning and decision making It is a continuous process of collecting key information to produce surveillance insights that are acted upon The ongoing gathering of information is mostly based on the reporting of signs of disease by those close to animals such as animal owners animal carers animal health practitioners and diagnosticians

This is often complemented by regular diagnostic testing in one form or another to determine the health status of a particular animal population. This surveillance approach faces growing challenges in many countries worldwide. The challenges include the emergence of new pathogens, budget constraints, expansion of disease vector ranges due to climate change, the spread of zoonoses, as well as changing public and stakeholder expectations. To meet these challenges, it is important to find new ways of enhancing existing surveillance approaches and develop new ones. These include undertaking a One Health approach in which humans, animals, plants, and the environment are part of an integrated ecosystem. Within the animal ecosystem, surveillance coverage should be adequate for all different animal types, i.e. livestock, companion animals, wildlife, and feral animals. This research topic aims to collate innovative ideas for enhancing all aspects of animal health surveillance. Strengthening participation in surveillance by those close to animals is critical. Other aspects include, but are not limited to, sample collection, diagnostic processes, data and information collection, data analysis, and information dissemination. We also encourage submission of manuscripts with a multidisciplinary scope and those that provide new insights in surveillance implementation or policy.

Principles and Challenges of Fundamental Methods in Veterinary Epidemiology and Economics Salome Dürr, Victoria J. Brookes, Andres M. Perez, 2021-08-09 [Developing field epidemiology training for veterinarians](#) Food and Agriculture Organization of the United Nations, 2021-11-29. Epidemiology workforce capacity development is a key part of strengthening Animal Health Systems. The aim of a field epidemiology training programme is to improve the institutional capacity to detect, prevent, control, and manage animal diseases that negatively impact animal and human health, farmers' livelihoods, food security, and trade. These guidelines provide an eight-step approach to develop competency-based training programmes from assessment of the needs and readiness of a country or region to developing, planning, implementing, and monitoring, and assessment of the impact of field epidemiology training programs. A set of core competencies developed by a participative and inclusive process for frontline and intermediate levels are provided to guide the development of curriculum and strategic plans to better achieve field epidemiology training programme sustainability. These guidelines should assist in addressing the veterinary services and animal health systems needs and priorities, including field epidemiology workforce capacity development. [Biosecurity in Animal Production and Veterinary Medicine](#) Jeroen Dewulf, Filip Van Immerseel, 2019-12-01. Globally, the way the animal production industry copes with infectious diseases is changing. The excessive use of antimicrobials is under debate, and it is becoming standard practice to implement thorough biosecurity plans on farms to prevent the entry and spread of pathogenic microorganisms. Not only in farm animal production but also in facilities where companion animals are kept, including in veterinary practices and clinics, awareness of the beneficial implications of a good biosecurity plan has raised. The book *Biosecurity in Animal Production and Veterinary Medicine* is the first compilation of both fundamental aspects of biosecurity practices and specific and practical information on the application of the biosecurity measures in different animal production and animal housing settings.
