Programming and Combinatorial Optimization Oktay Günlük, Gerhard J. Woeginger, 2011-05-10 This book constitutes the proceedings of the 15th International Conference on Integer Programming and Combinatorial Optimization IPCO 2011 held in New York USA in June 2011 The 33 papers presented were carefully reviewed and selected from 110 submissions The conference is a forum for researchers and practitioners working on various aspects of integer programming and combinatorial optimization with the aim to present recent developments in theory computation and applications The scope of IPCO is viewed in a broad sense to include algorithmic and structural results in integer programming and combinatorial optimization as well as revealing computational studies and novel applications of discrete optimization to practical problems

Aspiration Based Decision Support Systems Andrzej Lewandowski, Andrzej P. Wierzbicki, 2013-11-11 It is not easy to summarize even in a volume the results of a scientific study conducted by circa 30 researchers in four different research institutions though cooperating between them and jointly with the International Institute for Applied Systems Analysis but working part time sponsored not only by IIASA's national currency funds but also by several other research grants in Poland The aims of this cooperative study were defined broadly by its title *Theory Software and Testing Examples for Decision Support Systems* The focusing theme was the methodology of decision analysis and support related to the principle of reference point optimization developed by the editors of this volume and called also variously aspiration led decision support quasi satisfying framework of rationality DIDAS methodology etc This focusing theme motivated extensive theoretical research from basic methodological issues of decision analysis through various results in mathematical programming in the fields of large scale and stochastic optimization nondifferentiable optimization cooperative game theory motivated and needed because of this theme through methodological issues related to software development to issues resulting from testing and applications We could not include in this volume all papers theoretical methodological applied software manuals and

documentation written during this cooperative study *Advances in Geometric Programming* Mordecai Avriel, 2013-03-09 In 1961 C Zener then Director of Science at Westinghouse Corporation and a member of the U S National Academy of Sciences who has made important contributions to physics and engineering published a short article in the Proceedings of the National Academy of Sciences entitled A Mathematical Aid in Optimizing Engineering Design In this article Zener considered the problem of finding an optimal engineering design that can often be expressed as the problem of minimizing a numerical cost function termed a generalized polynomial consisting of a sum of terms where each term is a product of a positive constant and the design variables raised to arbitrary powers He observed that if the number of terms exceeds the number of variables by one the optimal values of the design variables can be easily found by solving a set of linear equations Furthermore certain invariances of the relative contribution of each term to the total cost can be deduced The mathematical intricacies in Zener's method soon raised the curiosity of R J Duffin the distinguished mathematician from Carnegie Mellon University who joined forces with Zener in laying the rigorous mathematical foundations of optimizing generalized polynomials Interestingly the investigation of optimality conditions and properties of the optimal solutions in such problems were carried out by Duffin and Zener with the aid of inequalities rather than the more common approach of the Kuhn Tucker theory **Stochastic and Statistical Methods in Hydrology and Environmental Engineering** Keith W.

Hipel, 2012-12-06 Objectives The current global environmental crisis has reinforced the need for developing flexible mathematical models to obtain a better understanding of environmental problems so that effective remedial action can be taken Because natural phenomena occurring in hydrology and environmental engineering usually behave in random and probabilistic fashions stochastic and statistical models have major roles to play in the protection and restoration of our natural environment Consequently the main objective of this edited volume is to present some of the most up to date and promising approaches to stochastic and statistical modelling especially with respect to groundwater and surface water applications Contents As shown in the Table of Contents the book is subdivided into the following main parts GENERAL ISSUES PART I PART II GROUNDWATER PART III SURFACE WATER PART IV STOCHASTIC OPTIMIZATION PART V MOMENT ANALYSIS PART VI OTHER TOPICS Part I raises some thought provoking issues about probabilistic modelling of hydrological and environmental systems The first two papers in Part I are in fact keynote papers delivered at an international environmental conference held at the University of Waterloo in June 1993 in honour of Professor T E Unny In his keynote paper Dr S J Burges of the University of Washington places into perspective the historical and future roles of stochastic modelling in hydrology and environmental engineering Additionally Dr Burges stresses the need for developing a sound scientific basis for the field of hydrology Professor P E *Introduction to Nonlinear Optimization* Amir Beck, 2014-10-27 This book provides the foundations of the theory of nonlinear optimization as well as some related algorithms and presents a variety of applications from diverse areas of applied sciences The author combines three pillars of

optimization theoretical and algorithmic foundation familiarity with various applications and the ability to apply the theory and algorithms on actual problems and rigorously and gradually builds the connection between theory algorithms applications and implementation Readers will find more than 170 theoretical algorithmic and numerical exercises that deepen and enhance the reader's understanding of the topics The author includes offers several subjects not typically found in optimization books for example optimality conditions in sparsity constrained optimization hidden convexity and total least squares The book also offers a large number of applications discussed theoretically and algorithmically such as circle fitting Chebyshev center the Fermat Weber problem denoising clustering total least squares and orthogonal regression and theoretical and algorithmic topics demonstrated by the MATLAB toolbox CVX and a package of m files that is posted on the book's web site

Basic Mathematical Programming Theory Giorgio Giorgi, Bienvenido Jiménez, Vicente Novo, 2023-07-18 The subject of static optimization also called mathematical programming is one of the most important and widespread branches of modern mathematics serving as a cornerstone of such scientific subjects as economic analysis operations research management sciences engineering chemistry physics statistics computer science biology and social sciences This book presents a unified progressive treatment of the basic mathematical tools of mathematical programming theory The authors expose said tools along with results concerning the most common mathematical programming problems formulated in a finite dimensional setting forming the basis for further study of the basic questions on the various algorithmic methods and the most important particular applications of mathematical programming problems This book assumes no previous experience in optimization theory and the treatment of the various topics is largely self contained Prerequisites are the basic tools of differential calculus for functions of several variables the basic notions of topology and of linear algebra and the basic mathematical notions and theoretical background used in analyzing optimization problems The book is aimed at both undergraduate and postgraduate students interested in mathematical programming problems but also those professionals who use optimization methods and wish to learn the more theoretical aspects of these questions
