Fürnkranz-Prskawetz,2009-05-05 The central aim of many studies in population research and demography is to explain cause effect relationships among variables or events For decades population scientists have concentrated their efforts on estimating the causes of effects by applying standard cross sectional and dynamic regression techniques with regression coefficients routinely being understood as estimates of causal effects The standard approach to infer the effects of causes in natural sciences and in psychology is to conduct randomized experiments In population studies experimental designs are generally infeasible In population studies most research is based on non experimental designs observational or survey designs and rarely on quasi experiments or natural experiments Using non experimental designs to infer causal relationships i e relationships that can ultimately inform policies or interventions is a complex undertaking Specifically treatment effects can be inferred from non experimental data with a counterfactual approach In this counterfactual perspective causal effects are defined as the difference between the potential outcome irrespective of whether or not an individual had received a

certain treatment or experienced a certain cause The counterfactual approach to estimate effects of causes from quasi experimental data or from observational studies was first proposed by Rubin in 1974 and further developed by James Heckman and others This book presents both theoretical contributions and empirical applications of the counterfactual approach to causal inference **Genders in the Life Course** Antonella Pinnelli,Filomena Racioppi,Rosella

Rettaroli,2007-09-06 Although both demography and gender relations have been the focus of research for quite some time the intersection of gender studies and demographic analysis is a more recent phenomenon Fortunately gender aspects of dem raphy and demographic aspects of gender are two lines of research that have received increased attention in recent years there is a growing group of researchers active in this area and consequently a growing body of publications of different kinds Despite this books treating the topic of gender and demography in a more comprehensive fashion are rare In fact I can think of few examples since the publication of two edited volumes in the first half of the 1990s namely Women s position and demographic change and Gender and family change in industrialized countries both resulting from the activities of the International Union for the Scientific Study of Population The editors of the current volume are therefore to be congratulated for taking the initiative to produce a much needed volume on gender and demography in developed countries with a focus on Europe The book covers a lot of ground from the age at first int course over union formation and union dissolution to excess male mortality and report important findings of empirical research mostly based on comp ative data from a number of European countries The source of these comp ative data is in most cases the Family and Fertility Surveys FFS carried out in the 1990s **The Palgrave Handbook of Intersectionality in Public Policy** Olena Hankivsky,Julia S.

Jordan-Zachery,2019-02-01 Grounded in black feminist scholarship and activism and formally coined in 1989 by black legal scholar Kimberl Williams Crenshaw intersectionality has garnered significant attention in the field of public policy and other disciplines fields of study The potential of intersectionality however has not been fully realized in policy largely due to the challenges of operationalization Recently some scholars and activists began to advance conceptual clarity and guidance for intersectionality policy applications yet a pressing need remains for knowledge development and exchange in relation to empirical work that demonstrates how intersectionality improves public policy This handbook fills this void by highlighting the key challenges possibilities and critiques of intersectionality informed approaches in public policy It brings together international scholars across a variety of policy sectors and disciplines to consider the state of intersectionality in policy research and analysis Importantly it offers a global perspective on the added value and how to of intersectionality informed policy approaches that aim to advance equity and social justice **Advanced Techniques for Modelling Maternal and**

Child Health in Africa Ngianga-Bakwin Kandala,Gebrenergus Ghilagaber,2013-09-06 This book presents both theoretical contributions and empirical applications of advanced statistical techniques including geo additive models that link individual measures with area variables to account for spatial correlation multilevel models that address the issue of clustering within

family and household multi process models that account for interdependencies over life course events and non random utilization of health services and flexible parametric alternatives to existing intensity models These analytical techniques are illustrated mainly through modeling maternal and child health in the African context using data from demographic and health surveys In the past the estimation of levels trends and differentials in demographic and health outcomes in developing countries was heavily reliant on indirect methods that were devised to suit limited or deficient data In recent decades world wide surveys like the World Fertility Survey and its successor the Demographic and Health Survey have played an important role in filling the gap in survey data from developing countries Such modern demographic and health surveys enable investigators to make in depth analyses that guide policy intervention strategies and such analyses require the modern and advanced statistical techniques covered in this book The text is ideally suited for academics professionals and decision makers in the social and health sciences as well as others with an interest in statistical modelling demographic and health surveys Scientists and students in applied statistics epidemiology medicine social and behavioural sciences will find it of value

Socioeconomic Differences in Old Age Mortality

Rasmus Hoffmann,2008-10-11 Social differences in health and mortality constitute a persistent finding in epidemiological demographic and sociological research This topic is increasingly discussed in the political debate and is among the most urgent public health issues However it is still unknown if socioeconomic mortality differences increase or decrease with age This book provides a comprehensive thoughtful and critical discussion of all aspects involved in the relationship between socioeconomic status health and mortality In a well written language it synthesizes the sociological theory of social inequality and an empirical study of mortality differences that has been performed at the Max Planck Institute for Demographic Research Rostock Germany The best available datasets from Denmark and the USA as two very different countries are used to analyze the age pattern of social mortality differences the Danish register data covering the whole Danish population between 1980 and 2002 This study is the most comprehensive analysis of socioeconomic mortality differences in the literature in terms of data quantity quality and the statistical method of event history modeling It makes important new theoretical and empirical contributions With a new method it also addresses the question whether the measurement of social mortality differences in old age so far has been biased by mortality selection due to unobserved heterogeneity This book signifies an important step forward in theory empirical data analysis and methodology and an advancement for many disciplines involved in the subject of socioeconomic differences in old age mortality Prof Dr Gabriele Doblhammer Max Planck Institute for Demographic Research Rostock Germany
