Street Commerce Andres Sevtsuk, 2020-06-12 A comprehensive analysis of the issues involved in planning for and facilitating successful street commerce Street commerce has gained prominence in urban areas where demographic shifts such as increasing numbers of single people and childless empty nesters along with technological innovations enabling greater flexibility of work locations and hours have changed how people shop and dine out Contemporary city dwellers are demanding smaller scale stores located in public spaces that are accessible on foot or by public transit At the same time the emergence of online retail undermines both the dominance and viability of big box discount businesses and drives brick and mortar stores to focus as much on the experience of shopping as on the goods and services sold Meanwhile in many developing countries the bulk of urban retail activity continues to take place on the street even as new car oriented shopping centers are on the rise In light of such trends street commerce will play an important role in twenty first century cities particularly in producing far reaching benefits for the environment and local communities Although street commerce is deeply intertwined with myriad contemporary urban visions and planning goals walkability quality of life inclusion equity and economic resilience it has rarely been the focus of systematic research and informed practice In Street Commerce Andres Sevtsuk presents a comprehensive analysis of the issues involved in implementing successful street commerce Drawing on economic theory urban design principles regulatory policies and merchant organization models he conceptualizes key problems and offers innovative solutions He provides a range of examples from around the world to detail how different cities and communities have bolstered and reinvigorated their street commerce According to Sevtsuk successful street commerce can only be achieved when the private sector urban policy makers planners and the public are equipped with the relevant knowledge and tools to plan and regulate it

Federal Register ,2012-12      *The New Neighborhood Senior Center* Joyce Weil,2014-11-03 In 2011 seven thousand American baby boomers those born between 1946 and 1964 turned sixty five daily As this largest U S generation ages cities municipalities and governments at every level must grapple with the allocation of resources and funding for maintaining the quality of life health and standard of living for an aging population In *The New Neighborhood Senior Center* Joyce Weil uses in depth ethnographic methods to examine a working class senior center in Queens New York She explores the ways in which social structure directly affects the lives of older Americans and traces the role of political social and economic institutions and neighborhood processes in the decision to close such centers throughout the city of New York Many policy makers and gerontologists advocate a concept of aging in place whereby the communities in which these older residents live provide access to resources that foster and maintain their independence But all aging in place is not equal and the success of such efforts depends heavily upon the social class and availability of resources in any given community Senior centers expanded in part by funding from federal programs in the 1970s were designed as focal points in the provision of community based services However for the first wave of boomers the role of these centers has come to be questioned Declining government support has led to the closings of many centers even as the remaining centers are beginning to rebrand to attract the boomer generation However *The New Neighborhood Senior Center* demonstrates the need to balance what the boomers want from centers with the needs of frailer or more vulnerable elders who rely on the services of senior centers on a daily basis Weil challenges readers to consider what changes in social policies are needed to support or supplement senior centers and the functions they serve      **Digital Punishment** Sarah Esther Lageson,2020 Data driven criminal justice operations have led to the transformation of criminal records into millions of data points These records are publicly disclosed on the internet commodified into valuable big data and leveraged against people In *Digital Punishment* Sarah Lageson demonstrates the consequences this system has for people society and public policy      **Social Media Made Me Rich** Matthew

Brown,2014-03-11 Marc Brown now calls New York City home and with In New York he shares his love for all that the city has to offer and all that it stands for including the way it s always changing and evolving From its earliest days as New Amsterdam to the contemporary wonders of Central Park the Statue of Liberty and the Empire State Building to the kid appealing subway High Line and so much more Marc s rollicking text and gorgeous illustrations showcase what he s come to adore about New York after fulfilling his life long dream to live in the city he fell in love with during a childhood visit This is at once a personal story from the beloved creator of Arthur a useful primer for first time travelers on what to see and do with kids in the Big Apple and a perfect keepsake after a visit It s also a great gift for anyone who loves New York the Crossroads of the World New York New York It s a heckuva town *Billboard* ,2012-01-07 In its 114th year Billboard remains the world s premier weekly music publication and a diverse digital events brand content and data licensing platform Billboard publishes the most trusted charts and offers unrivaled reporting about the latest music video gaming media digital and mobile entertainment issues and trends *Robust Network Compressive Sensing* Guangtao Xue,Yi-Chao Chen,Feng Lyu,Minglu Li,2022-10-22 This book investigates compressive sensing techniques to provide a robust and general framework for network data analytics The goal is to introduce a compressive sensing framework for missing data interpolation anomaly detection data segmentation and activity recognition and to demonstrate its benefits Chapter 1 introduces compressive sensing including its definition limitation and how it supports different network analysis applications Chapter 2 demonstrates the feasibility of compressive sensing in network analytics the authors we apply it to detect anomalies in the customer care call dataset from a Tier 1 ISP in the United States A regression based model is applied to find the relationship between calls and events The authors illustrate that compressive sensing is effective in identifying important factors and can leverage the low rank structure and temporal stability to improve the detection accuracy Chapter 3 discusses that there are several challenges in applying compressive sensing to real world data Understanding the reasons behind the challenges is important for designing methods and mitigating their impact The authors analyze a wide range of real world traces The analysis demonstrates that there are different factors that contribute to the violation of the low rank property in real data In particular the authors find that 1 noise errors and anomalies and 2 asynchrony in the time and frequency domains lead to network induced ambiguity and can easily cause low rank matrices to become higher ranked To address the problem of noise errors and anomalies in Chap 4 the authors propose a robust compressive sensing technique It explicitly accounts for anomalies by decomposing real world data represented in matrix form into a low rank matrix a sparse anomaly matrix an error term and a small noise matrix Chapter 5 addresses the problem of lack of synchronization and the authors propose a data driven synchronization algorithm It can eliminate misalignment while taking into account the heterogeneity of real world data in both time and frequency domains The data driven synchronization can be applied to any compressive sensing technique and is general to any real world data The authors illustrates that the combination of the two techniques can reduce

the ranks of real world data improve the effectiveness of compressive sensing and have a wide range of applications The networks are constantly generating a wealth of rich and diverse information This information creates exciting opportunities for network analysis and provides insight into the complex interactions between network entities However network analysis often faces the problems of 1 under constrained where there is too little data due to feasibility and cost issues in collecting data or 2 over constrained where there is too much data so the analysis becomes unscalable Compressive sensing is an effective technique to solve both problems It utilizes the underlying data structure for analysis Specifically to solve the under constrained problem compressive sensing technologies can be applied to reconstruct the missing elements or predict the future data Also to solve the over constraint problem compressive sensing technologies can be applied to identify significant elements To support compressive sensing in network data analysis a robust and general framework is needed to support diverse applications Yet this can be challenging for real world data where noise anomalies and lack of synchronization are common First the number of unknowns for network analysis can be much larger than the number of measurements For example traffic engineering requires knowing the complete traffic matrix between all source and destination pairs in order to properly configure traffic and avoid congestion However measuring the flow between all source and destination pairs is very expensive or even infeasible Reconstructing data from a small number of measurements is an underconstrained problem In addition real world data is complex and heterogeneous and often violate the low level assumptions required by existing compressive sensing techniques These violations significantly reduce the applicability and effectiveness of existing compressive sensing methods Third synchronization of network data reduces the data ranks and increases spatial locality However periodic time series exhibit not only misalignment but also different frequencies which makes it difficult to synchronize data in the time and frequency domains The primary audience for this book is data engineers analysts and researchers who need to deal with big data with missing anomalous and synchronization problems Advanced level students focused on compressive sensing techniques will also benefit from this book as a reference
