 W. Fowler, Donald R. Paul, 1978 **Electrocorrosion and Protection of Metals** Joseph Riskin, 2008-11-07 Electrocorrosion
 the corrosion of metallic constructions by external currents is the most significant factor in conductive aggressive
 environments Corrosion of underground and underwater metal constructions by stray currents has been comprehensively
 studied in the past decades and is considered here only in the form of a review The primary attention is on corrosion by
 external anodic mainly and cathodic currents of metal constructions in the highly aggressive environments typical for
 electrochemical plants where penetration of the external currents leakage currents from the electrolytic baths into metal
 constructions is unavoidable A new approach to the problem of electrocorrosion protection of passive structural metals is
 considered in this book keeping the metals attacked by external currents in the boundaries of their passive field The systems
 developed in accordance with this approach are based on the modification of existing and elaboration of new methods of
 electrocorrosion protection These systems take into account corrosion and electrochemical characteristics of the aggressive
 media redox potential conductivity etc and of the passive metal corrosion and activation potentials current density in a
 passive state etc as well as the sizes and distribution character of the external currents The book covers analysis of leakage
 current distributions in electrochemical plants their influence methods to estimate corrosion stability of metallic structures
 subject to external currents and presents many concrete examples of the successful introduction of corrosion protection
 systems in operating plants A new approach to protection from electrocorrosion taking into account the passive state of the
 metal in aggressive media Newly developed and modifications of well known methods of electrocorrosion protection are

presented Systematized data on electrocorrosion and protection of metals especially in electrochemical plants allow corrosion engineers researchers and personnel maintaining the equipment of electrochemical plants to analyze the corrosion state of metallic equipment and prevent electrocorrosion **Thermoset Resins Market Report** Ken L.
