Advances In Cancer Stem Cell Biology:

Advances in Cancer Stem Cell Biology Roberto Scatena,Alvaro Mordente,Bruno Giardina,2011-10-06 In recent years cancer stem cells have been recognized as important component in carcinogenesis and they seem to form the basis of many if not all tumor types Cancer stem cells or cancer cell like stem cells have been isolated from various cancers of different origin blood breast brain skin head and neck thyroid cervix lung retina colon pancreas and so on Cancer stem cells rare cells with indefinite proliferative potential that drive the formation and growth of tumours seem to show intriguing relationships with physiological stem cells Specifically these cancer cells show significant similarities in the mechanisms that regulate self renewal of normal stem cells Moreover tumour cells might directly arise from normal stem cells Further the cellular biology of cancer stem cells show a lot of similarities with normal stem cells

Advances in Stem Cell Aging K. Lenhard Rudolph, 2012 Up to date meeting

report of the Else Kröner Fresenius Symposium on Adult Stem Cell Aging Adult stem cells are present in most postnatal tissues of mammals Tissues with high rates of cell turnover depend on the functional capacity of stem cells for lifelong maintenance of tissue homeostasis Adult stem cells are also required for the regeneration of tissues in response to injury as in for example the regeneration of skeletal muscle In addition to its function in tissue homeostasis and regeneration adult stem cells can represent the cell type of origin of various types of cancers including leukemia and colorectal cancer Stem cells are the most long lived cells in the proliferative compartment of mammalian tissues Therefore stem cells have an increased risk of acquiring mutations that could ultimately lead to the transformation of tissue stem cells This publication presents the current knowledge in the field of stem cell aging which was discussed at the Else Kröner Fresenius Symposium on Advances in Stem Cell Aging in 2011 It will be of special interest to scientists working on stem cell research aging regeneration and cancer as well as physicians and scientists specializing in geriatric medicine internal medicine and surgery

Prominin-1 (CD133): New Insights on Stem & Cancer Stem Cell Biology Denis Corbeil, 2012-11-19 Prominin 1 or otherwise known as CD133 is a glycoprotein that is present in humans and mice Since the first description of prominin in 1997 in mouse neuroepithelial cells and in human hematopoietic stem cells as AC133 antigen this molecule has aroused a large interest especially as a stem cell marker that gave rise to an ever growing body of publications and more recently its expression in cancer stem cells Controversies as to its role as a cancer stem and its detection in different models as well as its use as a prognostic marker have emerged Yet beyond its use as a stem cell and cancer stem cell marker prominin 1 CD133 displays unique biological features and appears of importance in other processes like for example in retinal biogenesis Indeed this five transmembrane plasma membrane glycoprotein which marks membrane protrusions is associated with several essential processes like cell polarity asymmetric cell division and membrane remodeling We propose to review current knowledge about this intriguing molecule and present pertinent information to

determine the biological role of prominins and assess their importance in medicine and cancer research The primary audience for this book is geared towards scientists and researchers with interest in cancer stem cells stem cells cell biology neurobiology and regenerative medicine

Cancer Stem Cells in Solid Tumors Alison L. Allan, 2011-08-12 The cancer stem cell hypothesis postulates that cancer arises from a subpopulation of tumor initiating cells or cancer stem cells CSCs While the idea of cancer stem cells has been around for more than a hundred years evidence from the fields of hematology and cancer biology has now demonstrated the critical role of stem cells in hematological malignancies and suggested that these same mechanisms are also central to the initiation progression and treatment of solid cancers Clinical and experimental studies have shown that CSCs exhibit many classical properties of normal stem cells including a high self renewal capacity and the ability to generate heterogeneous lineages the requirement for a specific niche microenvironment to grow and an increased capacity for self protection against harsh environments toxins and drugs

Cancer Stem Cells in Solid Tumors represents a detailed overview of cancer stem cells and their role in solid cancers Comprised of 24 chapters this volume will provide readers with a comprehensive understanding of this important and evolving field Topics covered include Introduction of the CSC hypothesis Historical perspectives and the contributing lessons from leukemia Current knowledge regarding the identification and role of CSCs in various forms of solid cancer including breast brain colorectal pancreatic prostate melanoma lung ovarian hepatocellular and head and neck cancer Molecular pathways involved in driving CSC function with a particular focus on the novel convergence of embryonic and tumorigenic signaling pathways In vitro and in vivo assays model systems and imaging modalities for studying CSCs The clinical importance of CSCs for cancer management and treatment including important implications for prognosis prediction and treatment resistance Consideration of the controversy surrounding the CSC hypothesis and important unanswered questions in this field This collective work was written by a group of prominent international experts in cancer biology oncology and or stem cell biology It will serve as a valuable resource for established researchers professors health care professionals and students in the medical and scientific community who are investigating stem cells and or oncology
