Advances in Cryogenic Engineering Peter Kittel, 1994 Advances in Cryogenic Engineering Materials Richard P. Reed, F.R. Fickett, Leonard T. Summers, M. Stieg, 2013-11-11 Proceedings of the Tenth International Cryogenic Materials Conference ICMC held in Albuquerque New Mexico July 12 16 1993 Advances in Cryogenic Engineering Materials U. Balu Balachandran, Donald G. Gubser, K. Ted Hartwig, Victoria A. Bardos, 2000-06-30 The 1999 Joint Cryogenic Engineering Conference CEC and International Cryogenic Materials Conference ICMC were held in Montreal Quebec Canada from July 12th to July 16th The joint conference theme was Cryogenics into the Next Millennium The total conference attendance was 797 with participation from 28 countries As with previous joint CEC and ICMC Conferences the participants were able to benefit from the joint conference s coverage of cryogenic applications and materials and their interactions The conference format of plenary oral and poster presentations and an extensive commercial exhibit the largest in CEC ICMC history aimed to promote this synergy The addition of short courses workshops and a discussion meeting enabled participants to focus on some of their specialties The technical tour organized by Suzanne Gendron was of Hydro Quebec s research institute laboratories near Montreal In keeping with the conference venue the entertainment theme was Jazz culminating in the performance of Vic Vogel and his Jazz Big Band at the conference banquet This 1999 ICMC Conference was chaired by Julian Cave of IREQ Institut de recherche d Hydro Quebec and the Program Chair and Vice Chair were Michael Green of the Lawrence Berkeley National Laboratory and Balu Balachandran of the Argonne National Laboratory respectively We especially appreciate the contributions of both the CEC and ICMC Boards and the conference managers Centennial Conferences under the supervision of Paula Pair and Kim Bass in making this conference a success **Advances in Cryogenic Engineering** Quan-Sheng Shu, Peter Kittel, David Glaister, John Hull, Bill Burt, Al Zeller, John Zbasnik, Vitalij Pecharsky, Steven W. Van Sciver, Ray Radebaugh, Michael DiPirro, J. Patrick Kelley, Klaus D. Timmerhaus, Jay Theilacker, Charles Reece, 2000-10-31 In recent years the technology of cryogenic comminution has been widely applied in the field of chemical engineering food making medicine production and particularly in recycling of waste materials Because of the increasing pollution of waste tires and the shortage of raw rubber resource the recycling process for waste rubber products has become important and commercially viable This technology has shown a great number of advantages such as causing no environmental pollution requiring low energy consumption and producing high quality products Hence the normal crusher which was used to reclaim materials such as waste tires nylon plastic and many polymer materials at atmospheric 12 temperature is being replaced by a cryogenic crusher In the cryogenic crusher the property of the milled material is usually very sensitive to temperature change When a crusher is in operation it will generate a great deal of heat that causes the material temperature increased Once the temperature increases over the vitrification temperature the material property will change and lose the brittle behavior causing the energy consumption to rise sharply Consequently the comminution process

cannot be continued Therefore it is believed that the cryogenic crusher is the most critical component in the cryogenic comminution system The research on the temperature increase and energy consumption in the cryogenic crusher is not only to reduce the energy consumption of the crusher but also to reduce the energy consumption of the cryogenic system
