Advances In Building Technology Abt 2002:

Advances in Building Technology M. Anson, J.M. Ko, E.S.S. Lam, 2002-11-14 This set of proceedings is based on the International Conference on Advances in Building Technology in Hong Kong on 4-6 December 2002. The two volumes of proceedings contain 9 invited keynote papers, 72 papers delivered by 11 teams and 133 contributed papers from over 20 countries around the world. The papers cover a wide spectrum of topics across the three technology sub-themes of structures and construction environment and information technology. The variety within these categories spans a width of topics and these proceedings provide readers with a good general overview of recent advances in building research. **Structural Health Monitoring 2003** Fu-Kuo Chang, 2003 Important new information on sensors monitoring prognosis networking and planning for safety and maintenance. **FRP Composites in Civil Engineering - CICE 2004** R. Seracino, 2004-12-15 The range of fibre reinforced polymer (FRP) applications in new construction and in the retrofitting of existing civil engineering infrastructure is continuing to grow worldwide. Furthermore, this progress is being matched by advancing research into all aspects of analysis and design. The Second International Conference on FRP Composites in *Modelling Methods for Energy in Buildings* Chris Underwood, Francis Yik, 2008-04-15 Climate change mitigation and sustainable practices are now at the top of political and technical agendas. Environmental system modelling provides a way of appraising options and this book will make a significant contribution to the uptake of such systems. It provides knowledge of the principles involved in modelling systems, builds confidence amongst designers and offers a broad perspective of the potential of these new technologies. The aim of the book is to provide an understanding of the concepts and principles behind predictive modelling methods, review progress in the development of the modelling software available and explore modelling in building design through international case studies based on real design problems. Steels Wei Sha, 2013-01-11 Steels and computer based modelling are fast growing fields in materials science as well as structural engineering, demonstrated by the large amount of recent literature. *Steels: From Materials Science to Structural Engineering* combines steels research and model development including the application of modelling techniques in steels. The latest research includes structural engineering modelling and novel prototype alloy steels such as heat resistant steel nitride strengthened ferritic martensitic steel and low nickel maraging steel. Researchers studying steels will find the topics vital to their work. Materials experts will be able to learn about steels used in structural engineering as well as modelling and apply this increasingly important technique in their steel materials research and development. *Flexible Forming for Fluid Architecture* Arno Pronk, 2021-10-11 This book on flexible formwork for fluid architecture is a multi-faceted research that covers a broad field from design to material and technology and from history to future developments. It offers a pragmatic approach that can be extended with more cases, materials, techniques and methods for fluid architecture and provides a better understanding of the main aspects of fluid architecture and to help them find the most suitable combinations of all aspects. The book is a challenging experience with many new

discoveries including two patents one on moulding of fluid surfaces and one on 3D printing of fibre reinforced ice It also features two world records the largest span 30 meters and the highest thin shell structure 30.5 meters in ice as well as a method for the construction of a fully laminated shell structure in insulated glass Advances in Construction ICT and e-Business Srinath Perera,Bingunath Ingirige,Kirti Ruikar,Esther Obonyo,2017-05-08 This internationally conducted study of the latest construction industry practices addresses a broad range of Information and Communication Technology applications Drawing on research conducted in the US and UK this book presents the state of the art of various ebusiness processes and examines BIM virtual environments and mobile technologies Innovation is a theme that runs throughout this book so in addition to the direct impact of these new technical achievements it also considers the management styles that helped them to emerge Examples from industry are illustrated with case studies and presented alongside research from some of the best known academics in this field This book is essential reading for all advanced students and researchers interested in how ICT is changing construction management and the construction industry *Energy Advancement and Conservation Act of 2001* United States.
