Mansi,2024-08-01 This book covers all diagnostic and therapeutic aspects of neuro oncological diseases In the last decade

the management of brain tumors has been revolutionized following the new WHO classification and thanks to the introduction of molecular markers into the clinical routine. From an imaging point of view, the continuous technological developments and the implementation of various radiopharmaceuticals have paved the way to new clinical indications and has helped optimize patient management. In this context, a major breakthrough could derive from the introduction of radiomics and artificial intelligence in the diagnostic and therapeutic pathway. Not forgetting the emerging role of heavy ion therapy as a complement to the innovative drugs and treatments adopted in medical oncology and radiation therapy. In the present book, all above mentioned aspects are covered starting with the novel standards for the WHO classification of brain tumors to the up to date surgical techniques and advanced therapeutic approaches passing through the currently available imaging modalities and ongoing developments embracing both radiology and nuclear medicine discipline. Imaging represents indeed the trait d'union for all the arguments described in the book; therefore, in most chapters, there are dedicated sessions focused on the role of imaging in each specific context. The publication aims to fill the gap between the clinicians and all professionals directly involved in the management of patients with brain tumors and the newest scientific outreach. Moreover, thanks to the comprehensive insight into the latest technological developments, scientists and researchers interested in the topic will find the book a useful tool for future studies and perspective discoveries.

Krieg, 2022-12-02 **Advances in Brain Tumor Therapy** Tanmay Abhay Kulkarni, Ramcharan Singh Angom, Joubert Banjop Kharlyngdoh, 2025-08-19. Brain tumors, a diverse group of neoplasms originating from abnormal cell growth within the brain or its surrounding structures, present complex diagnostic and therapeutic challenges. The diagnosis and treatment of brain tumors require a multidisciplinary approach incorporating advanced imaging techniques, histopathology, molecular profiling, and innovative therapeutic interventions. Diagnostic imaging techniques such as magnetic resonance imaging (MRI), computed tomography (CT), and positron emission tomography (PET) play a prominent role in assessing the tumor's location, size, and characteristics. Advanced imaging methods such as functional MRI (fMRI) and diffusion tensor imaging (DTI) aid in identifying critical areas of the brain affected by the tumor and facilitating surgical planning. Histopathology, immunohistochemistry, molecular testing, and genetic profiling have become integral to identifying specific molecular alterations that guide treatment decisions and predict the tumor's behavior and response to therapies. Additionally,

gaining more information regarding novel concepts such as utilization of stem cells in prognosis advancement in the novel therapeutic options and mediation of intra cellular signaling and metabolism related to tumor growth will lead to novel treatments Integration of metabolic module along with molecular and morphological features could allow a deeper understanding of brain tumors and drive the pursuit of identification of emerging effective therapy options With this Research Topic we hope to consolidate novel diagnostic techniques as well as emerging therapeutic options together could lead to the development of a robust practical and innovative take on life saving diagnostic and therapeutic options for individuals with brain tumors
