A team of distinguished authors in the field of aviation law provide a cogent synthesis from which sound legal opinions and strategies of legal action may be confidently built. Among the many topics here in depth are the following: definition and classification of airspace; distinction between civil and state aircraft; air navigation and air traffic control services; airport charges and overflight charges; structure of ICAO standard setting functions and audit functions of ICAO; functions of the International Air Transport Association (IATA) policy and effects of deregulation and liberalization of air transport policy; the International Registry for Aircraft Equipment; air carrier liability regimes and claims procedure measures to combat aviation terrorism; air piracy and sabotage and the Open Skies Agreements. This publication cites significant legislation and court rulings including from the United States and the European Union where far reaching measures on market access, competition and passenger rights have set trends for other regions of the world.
