Morphology and Molecular Biology? Angela Mastronuzzi, Andrea Carai, Lucia Quaglietta, Elisabetta Schiavello, 2024-05-22 Tumors of the central nervous system CNS are a dramatic health problem due to their high morbidity and mortality in all ages In the pediatric population brain tumors constitute the second most common cancer diagnosed worldwide each year accounting for approximately 25% of childhood cancers Although there has been a moderate increase in survival rates for children with CNS tumors over the past decades CNS tumors remain the second leading cause of cancer death in children

less than 20 years of age The fifth edition of the World Health Organization WHO Classification of Tumors of the Central Nervous System WHO CNS5 was recently released This builds on the 2016 WHO CNS tumor update which for the first time incorporated molecular data with histology in classifying CNS tumors The changes in the WHO CNS5 group tumors into more biologically and molecularly defined entities with better characterized natural histories as well as introducing new tumor types and subtypes especially in the pediatric population Most importantly these updated classifications will enable clinicians to have a better understanding of the prognosis and optimal therapy for patients with specific CNS tumors

Therefore optimizing the treatment of childhood CNS tumors remains a tremendously challenging task requiring a multidisciplinary approach involving many pediatric specialists as well as the support of molecular biologists and pharmacologists

Probabilistic Modeling for Segmentation in Magnetic Resonance Images of the Human Brain Michael Wels, 2010 In this book the fully automatic generation of semantic annotations for medical imaging data by means of medical image segmentation and labeling is addressed In particular the focus is on the segmentation of the human brain and related structures from magnetic resonance imaging MRI data Three novel probabilistic methods from the field of database guided knowledge based medical image segmentation are presented Each of the methods is applied to one of three MRI segmentation scenarios 1 3 D MRI brain tissue classification and intensity non uniformity correction 2 pediatric brain cancer segmentation in multi spectral 3 D MRI and 3 3 D MRI anatomical brain structure segmentation All the newly developed methods make use of domain knowledge encoded by probabilistic boosting trees PBT which is a recent machine learning technique For all the methods uniform probabilistic formalisms are presented that group the methods into the broader context of probabilistic modeling for the purpose of image segmentation It is shown by comparison with other methods from the literature that in all the scenarios the newly developed algorithms in most cases give more accurate results and have a lower computational cost Evaluation on publicly available benchmarking data sets ensures reliable comparability of the results to those of other current and future methods One of the methods successfully participated in the ongoing online caudate segmentation challenge www.cause07.org where it ranks among the top five methods for this particular segmentation scenario

Molecular Biology and Pathology of Paediatric Cancer Catherine J. Cullinane, Susan A. Burchill, Jeremy A. Squire, John J. O'Leary, Ian J. Lewis, 2003-11-13 There has been an explosion of knowledge and enormous progress in the fundamental understanding of the biology of cancer in recent years This has included the realisation that cancer occurs when normal cellular functions are disturbed leading to a malignant phenotype Much research has focussed on understanding the types of disturbances that can occur the contribution that these abnormalities can make to the development and behaviour of particular cancers and more recently the recognition that these cellular and genetic abnormalities can provide rational targets for new therapeutic approaches Information about the biology of cancers that occur in children has increased in parallel with these more general advances and this book is intended to provide a focus for

readers who wish to have an understanding of our current state of knowledge A international group of editors and contributors provide guidelines on the molecular biology and pathology of paediatric oncology aimed at clinicians and scientists working in the specialty who wish to understand current developments in molecular pathology as applied to their field The book is a broad ranging review focusing on the impact of molecular and cytogenetic techniques on our understanding of the aetiology clinical behaviour diagnosis and management of paediatric cancer The first section outlines the laboratory handling of tissue samples theory and methodology of cytogenetic and molecular techniques and discusses predisposition syndromes The second section highlights the application of cytogenetic and molecular methods in diagnosis and treatment of the major paediatric cancers Update in Pediatric Neuro-Oncology Natasha Pillay Smiley,2019-01-28 This book is a printed edition of the Special Issue Update in Pediatric Neuro Oncology that was published in Bioengineering
