Advanced Topics in Term Rewriting Enno Ohlebusch,2002-04-12 Unlike current survey articles and textbooks here the so called confluence and termination hierarchies play a key role Throughout the relationships between the properties in the hierarchies are reviewed and it is shown that for every implication X Y in the hierarchies the property X is undecidable for all term rewriting systems satisfying Y Topics covered include the newest techniques for proving termination of rewrite systems a comprehensive chapter on conditional term rewriting systems a state of the art survey of modularity in term rewriting and a uniform framework for term and graph rewriting as well as the first result on conditional graph rewriting   **Advanced Topics in Term Rewriting** Enno Ohlebusch,2013-04-17 Term rewriting techniques are applicable in various fields of computer sci ence in software engineering e g equationally specified abstract data types in programming languages e g functional logic programming in computer algebra e g symbolic computations Grabner bases in pro gram verification e g automatically proving termination of programs in automated theorem proving e g equational unification and in algebra e g Boolean algebra group theory In other words term rewriting has applications in practical computer science theoretical computer science and mathematics Roughly speaking term rewriting techniques can suc cessfully be applied in areas that demand efficient methods for reasoning with equations One of the major problems one encounters in the theory of term rewriting is the characterization of classes of rewrite systems that have a desirable property like confluence or termination If a term rewriting system is conflu ent then the normal form of a given term is unique A terminating rewrite system does not permit infinite computations that is every computation starting from a term must end in a normal form Therefore in a system that is both terminating and confluent every computation leads to a result that is unique regardless of the order in which the rewrite rules are applied This book provides a comprehensive study of termination and confluence as well as related properties   **Advances in Logic Based Intelligent Systems** Kazumi Nakamatsu,Jair Minoro Abe,2005 LAPTEC 2005 promoted the discussion and interaction between researchers and practitioners focused on both theoretical and practical disciplines concerning logics applied to technology with diverse backgrounds including all kinds of intelligent systems having classical or non classical logics as underlying common matters   *Term Rewriting and Applications* Frank Pfenning,2006-07-26 This book constitutes the refereed proceedings of the 17th International Conference on Rewriting Techniques and Applications RTA 2006 held in Seattle WA USA in August 2006 The book presents 23 revised full papers and 4 systems description papers together with 2 invited talks and a plenary talk of the hosting FLoC conference Topics include equational reasoning system verification lambda calculus theorem proving system descriptions termination higher order rewriting and unification and more   **Recent Advances in Constraints** Angelo Oddi,François Fages,Francesca Rossi,2009-07-28 This book constitutes the thoroughly refereed and extended post workshop proceedings of the 13th Annual ERCIM International Workshop on Constraint Solving and Constraint Logic Programming CSCLP 2008 held in Rome Italy in

June 2008 The 9 revised full papers presented were carefully reviewed and selected from 14 initial submissions The papers in this volume present original research results as well as applications in many aspects of constraint solving and constraint logic programming Research topics that can be found in the papers are rst order constraints symmetry breaking global constraints constraint optimization problems distributed constraint solving problems soft constraints as well as the analysis of application domains such as cumulative resource problems and hybrid systems *Term Rewriting Systems* Terese,2003-03-20 Term rewriting systems developed out of mathematical logic and are an important part of theoretical computer science They consist of sequences of discrete transformation steps where one term is replaced with another and have applications in many areas from functional programming to automatic theorem proving and computer algebra This 2003 book starts at an elementary level with the earlier chapters providing a foundation for the rest of the work Much of the advanced material appeared here for the first time in book form Subjects treated include orthogonality termination completion lambda calculus higher order rewriting infinitary rewriting and term graph rewriting Many exercises are included with selected solutions provided on the web A comprehensive bibliography makes this book ideal both for teaching and research A chapter is included presenting applications of term rewriting systems with many pointers to actual implementations **Advances in Data Management** Zbigniew W Ras,Agnieszka Dardzinska,2009-10-27 Data Management is the process of planning coordinating and controlling data resources More often applications need to store and search a large amount of data Managing Data has been continuously challenged by demands from various areas and applications and has evolved in parallel with advances in hardware and computing techniques This volume focuses on its recent advances and it is composed of five parts and a total of eighteen chapters The first part of the book contains five contributions in the area of information retrieval and Web intelligence a novel approach to solving index selection problem integrated retrieval from Web of documents and data bipolarity in database querying deriving data summarization through ontologies and granular computing for Web intelligence The second part of the book contains four contributions in knowledge discovery area Its third part contains three contributions in information integration and data security area The remaining two parts of the book contain six contributions in the area of intelligent agents and applications of data management in medical domain **Frontiers of Combining Systems** Uli Sattler,Martin Suda,2023-09-14 This book constitutes the refereed proceedings of the 14th International Symposium on Frontiers of Combining Systems FroCoS 2023 held in Prague Czech Republic in September 2023 The symposium was co located with the 32nd International Conference on Automated Reasoning with Analytic Tableaux and Related Methods TABLEAUX 2023 The 14 papers presented were thorouhgly reviewed and selected from the 22 high quality paper submissions They are grouped in the volume according to the following topic classification analysis of programs and equations unification decidable fragments frameworks higher order theorem proving This is an open access book *Advances in Artificial Intelligence - IBERAMIA 2002* Francisco J. Bonilla,2003-06-30 The 8th Ibero American Conference on Artificial Intelligence IBERAMIA 2002 took place in Spain for the second time in 14 years the first conference was organized in Barcelona in January 1988 The city of Seville hosted this 8th conference giving the participants the opportunity of enjoying the richness of its historical and cultural atmosphere Looking back over these 14 years key aspects of the conference such as its structure organization the quantity and quality of submissions the publication policy and the number of attendants have significantly changed Some data taken from IBERAMIA 88 and IBERAMIA 2002 may help to illustrate these changes IBERAMIA 88 was planned as an initiative of three Ibero American AI associations the Spanish Association for AI AEPIA the Mexican Association for AI SMIA and the Portuguese Association for AI APIA The conference was organized by the AEPIA staff including the AEPIA president Jos Cuena the secretary Felisa Verdejo and other members of the AEPIA board The proceedings of IBERAMIA 88 contain 22 full papers grouped into six areas knowledge representation and reasoning learning AI tools expert systems language and vision Papers were written in the native languages of the participants Spanish Portuguese and Catalan Twenty extended abstracts describing ongoing projects were also included in the proceedings   *Computational Logic* Dov M. Gabbay,Jörg H. Siekmann,John Woods,2014-12-09 Handbook of the History of Logic brings to the development of logic the best in modern techniques of historical and interpretative scholarship Computational logic was born in the twentieth century and evolved in close symbiosis with the advent of the first electronic computers and the growing importance of computer science informatics and artificial intelligence With more than ten thousand people working in research and development of logic and logic related methods with several dozen international conferences and several times as many workshops addressing the growing richness and diversity of the field and with the foundational role and importance these methods now assume in mathematics computer science artificial intelligence cognitive science linguistics law and many engineering fields where logic related techniques are used inter alia to state and settle correctness issues the field has diversified in ways that even the pure logicians working in the early decades of the twentieth century could have hardly anticipated Logical calculi which capture an important aspect of human thought are now amenable to investigation with mathematical rigour and computational support and fertilized the early dreams of mechanised reasoning Calculemus The Dartmouth Conference in 1956 generally considered as the birthplace of artificial intelligence raised explicitly the hopes for the new possibilities that the advent of electronic computing machinery offered logical statements could now be executed on a machine with all the far reaching consequences that ultimately led to logic programming deduction systems for mathematics and engineering logical design and verification of computer software and hardware deductive databases and software synthesis as well as logical techniques for analysis in the field of mechanical engineering This volume covers some of the main subareas of computational logic and its applications Chapters by leading authorities in the field Provides a forum where philosophers and scientists interact Comprehensive reference source on the history of logic   *Advances in Artificial Intelligence -- IBERAMIA*
