Wired/Wireless Internet Communications Peter Langendoerfer, Mingyan Liu, Ibrahim Matta, Vassilis Tsaoussidis, 2004-01-20

The International Conference on Wired Wireless Internet Communications WWIC was held for the second time following a successful start in 2002 in Las Vegas

The goal of the conference was to present high quality results in the field and to provide a framework for research collaboration through focused discussions that designated future research efforts and directions

The number and the quality of submissions indicate that we are well on the way to establishing WWIC as a major event in the field of wired wireless internet communications

We received around 60 competitive submissions from Europe North America the Middle East and the Far East

Each submission was reviewed by at least two experts although the majority received three or more reviews

Based on this rigorous reviewing procedure the International Program Committee selected 26 submissions for presentation and publication in the proceedings

Therefore we should all expect the quality of a selective conference in this volume

We hope you will enjoy it

The papers selected for presentation at WWIC 2004 were stimulating and of utmost interest

They were organized into eight sessions

- 1 Protocol engineering and energy efficiency in wireless networks
- 2 Mobility management and mobile devices
- 3 Transport layer and congestion control
- 4 Architecture implementation and experimentation
- 5 Network and protocol modeling
- 6 Wireless network scheduling and analysis
- 7 Multimedia distribution and group communication
- 8 Service discovery

We would like to thank the authors for choosing WWIC 2004 to submit their results

We would also like to thank all the members of the Technical Program Committee as well as the additional reviewers for their effort to provide detailed and constructive reviews

**Introduction to Wireless Communications and Networks** Krishnamurthy Raghunandan, 2022

This book provides an intuitive and accessible introduction to the fundamentals of wireless communications and their tremendous impact on nearly every aspect of our lives

The author starts with basic information on physics and mathematics and then expands on it helping readers understand fundamental concepts of RF systems and how they are designed. Covering diverse topics in wireless communication systems including cellular and personal devices, satellite and space communication networks, telecommunication regulation, standardization and safety, the book combines theory and practice using problems from industry and includes examples of day to day work in the field. It is divided into two parts: basic fundamentals and advanced selected topics. Drawing on the author's extensive training and industry experience in standards, public safety and regulations, the book includes information on what checks and balances are used by wireless engineers around the globe and address questions concerning safety, reliability and long term operation. A full suite of classroom information is included.

Wireless Networking Principles: From Terrestrial to Underwater Acoustic Shengming Jiang, 2018-04-13  
 This book systematically summarizes the fundamentals and various technologies in both terrestrial radio wireless networks and underwater acoustic networks (UWANs). It addresses the basic issues frequently investigated in terrestrial radio wireless networks and the key technologies suitable for the newly developing research area of UWANs. Starting with a review of our current understanding of wireless networks, it then introduces the principles of the main technologies including error control, medium access control (MAC) protocols, routing protocols, end to end transmission control and mobility issues as well as network security for terrestrial radio wireless networks and offers detailed surveys of these technologies for UWANs. Providing readers with the basic knowledge of terrestrial radio wireless networking technologies and raising readers awareness of the developing topic of UWANs in ocean, it is a valuable resource for researchers and practitioners in terrestrial radio wireless networks and UWANs.

**Coping with Interference in Wireless Networks**  
 Seyed Javad Kazemitabar, 2014-10-18  
 Unlike wired networks where transmitters have no effect on receivers other than their own, in wireless networks we are limited by interference. The traditional routing methods are not optimal any more when it comes to a wireless medium. The maximum data rate on each link depends not only on the power in that link but also on the transmitted power from adjacent links. That is why the problem of power optimal routing needs to be solved jointly with

scheduling This suggests a cross layer design method as opposed to traditional networking where the algorithm for each layer is designed separately In *Coping with Interference in Wireless Networks* we introduce several methods engaging different layers of network to mitigate interference in a wireless network Wireless Networks P.
