

# Module 5: Advanced Mechanics

## Projectile Motion

Analyse the motion of projectiles by resolving the motion into horizontal and vertical components, making the following assumptions:

- constant vertical acceleration due to gravity ( $g = 9.81 \text{ m/s}^2$ )
- zero air resistance ( $g = 0$ )

### ► Projectile Motion

A projectile motion is a two-dimensional motion in which an object is launched into the air and moves in a parabolic path. The motion is determined by the projectile's initial velocity and the forces acting on it.

A projectile's general trajectory follows a parabolic path. The projectile's horizontal and vertical components of motion are independent of each other, which means they can be analysed separately.

### ► Horizontal Component of Motion

The horizontal motion of a projectile is constant. This is because there is no net force acting on the projectile in the horizontal direction. Therefore, the horizontal component of the projectile's acceleration is zero, which means the horizontal velocity is constant.
