Advances In Ambient Intelligence Volume 164 Frontiers In Artificial Intelligence And Applications:

Advances in Ambient Intelligence Juan Carlos Augusto, Daniel Shapiro, 2007 Ambient Intelligence lies at the confluence of several trends the continued decrease in cost and size of computing technology the increasing availability of networking and communication infrastructure the growing public familiarity comfort with computing artifacts and practical advances in artificial intelligence These developments make it possible to contemplate the ubiquitous deployment of intelligent systems prototypically in smart homes but more broadly in public spaces private automobiles and on individual appliances and hand held devices in applications ranging from entertainment through eldercare to safety critical device control Ambient Intelligence is a young field As a result it has been natural to wonder what the technology can do to improve the way we live At the same time it is becoming increasingly important to ask What do we want since the intent is to embed technology in new and pervasive ways The contributions in this volume provide a window into the visions and trends currently dominating the area of Ambient Intelligence This publication is divided into three sections The first describes visions for the future of Ambient Intelligence the second addresses core technology of the field and the third provides an analysis of elements of the area which will demand special consideration during the future development of the area ,

Adaptive Web Sites Juan D. Velásquez, Vasile Palade, 2008 This book can be presented in two different ways Firstly it introduces a particular methodology to build adaptive Web sites and secondly it presents the main concepts behind Web mining and then applying them to adaptive Web sites In this case Adaptive Web Sites is the case study to exemplify the tools introduced in the text The authors start by introducing the Web and motivating the need for adaptive Web sites The second chapter introduces the main concepts behind a Web site its operation its associated data and structure user sessions etc Chapter three explains the Web mining process and the tools to analyze Web data mainly focused in machine learning The fourth chapter looks at how to store and manage data Chapter five looks at the three main and different mining tasks content links and usage The following chapter covers Web personalization a crucial topic if we want to adapt our site to specific groups of people Chapter seven shows how to use information extraction techniques to find user behavior patterns The subsequent chapter explains how to acquire and maintain knowledge extracted from the previous phase Finally chapter nine contains the case study where all the previous concepts are applied to present a framework to build adaptive Web sites In other words the authors have taken care of writing a self contained book for people that want to learn and apply personalization and adaptation in Web sites This is commendable considering the large and increasing bibliography in these and related topics The writing is easy to follow and although the coverage is not exhaustive the main concepts and topics are all covered

knowledge discovery and data mining **Distributed Autonomous Robotic Systems 8** Hajime Asama, Haruhisa Kurokawa, Jun Ota, Kosuke Sekiyama, 2009-05-15 The International Symposia on Distributed Autonomous Robotic Systems DARS started at Riken Japan in 1992 Since then the DARS symposia have been held every two years in 1994 and 1996 in Japan Riken Wako in 1998 in Germany Karlsruhe in 2000 in the USA Knoxville TN in 2002 in Japan Fukuoka in 2004 in France Toulouse and in 2006 in the USA Minneapolis MN The 9th DARS symposium which was held during November 17 19 in T kuba Japan hosted 84 participants from 13 countries The 48 papers presented there were selected through rigorous peer review with a 50% acceptance ratio Along with three invited talks they addressed the spreading research fields of DARS which are classifiable along two streams theoretical and standard studies of DARS and interdisciplinary studies using DARS concepts The former stream includes multi robot cooperation task assignment methodology among multiple robots multi robot localization etc swarm intelligence and modular robots The latter includes distributed sensing mobiligence ambient intelligence and mul agent systems interaction with human beings This book not only offers readers the latest research results related to DARS from theoretical studies to application oriented ones it also describes the present trends of this field With the diversity and depth revealed herein we expect that DARS technologies will flourish soon *Artificial General Intelligence 2008* P. Wang, B. Goertzel, S. Franklin, 2008-02-18 The field of Artificial Intelligence AI was initially directly aimed at the construction of thinking machines that is computer systems with human like general intelligence But this task proved more difficult than expected As the years passed AI researchers gradually shifted focus to producing AI systems that intelligently approached specific tasks in relatively narrow domains In recent years however more and more AI researchers have recognized the necessity and the feasibility of returning to the original goal of the field Increasingly there is a call to focus less on highly specialized narrow AI problem solving systems and more on confronting the difficult issues involved in creating human level intelligence and ultimately general intelligence that goes beyond the human level in various ways Artificial General Intelligence AGI as this renewed focus has come to be called attempts to study and reproduce intelligence as a whole in a domain independent way Encouraged by the recent success of several smaller scale AGI related meetings and special tracks at conferences the initiative to organize the very first international conference on AGI was taken with the goal to give researchers in the field an opportunity to present relevant research results and to exchange ideas on topics of common interest In this collection you will find the conference papers full length papers short position statements and also the papers presented in the post conference workshop on the sociocultural ethical and futurological implications of AGI

Handbook of Ambient Intelligence and Smart Environments Hideyuki Nakashima, Hamid Aghajan, Juan Carlos Augusto, 2009-10-01 Our homes anticipate when we want to wake up Our computers predict what music we want to buy Our cars adapt to the way we drive In today's world even washing machines rice cookers and toys have the capability of autonomous decision making As we grow accustomed to computing power embedded in our surroundings it becomes clear that these smart environments with a number of devices controlled by a coordinating system capable of ambient intelligence will play an ever larger role in our lives This handbook provides readers with comprehensive up to date coverage in what is a key technological field Systematically dealing with each aspect of ambient intelligence and smart environments the text covers everything from visual information capture and human computer interaction to multi agent systems network use of sensor data and building more rationality into artificial systems The book also details a wide range of applications examines case studies of recent major projects from around the world and analyzes both the likely impact of the technology on our lives and its ethical implications With a wide variety of separate disciplines all conducting research relevant to this field this handbook encourages collaboration between disparate researchers by setting out the fundamental concepts from each area that are relevant to ambient intelligence and smart environments providing a fertile soil in which ground breaking new work can develop

Formal Ontologies Meet Industry Stefano Borgo, Leonardo Lesmo, 2008 The success of the methodologies associated with knowledge modeling and ontologies led to increased need of a comparison between different approaches and results This book focuses on ontology in relation to business enterprise enterprise knowledge practice and linguistics

Ontology Learning and Population: Bridging the Gap Between Text and Knowledge P. Buitelaar, P. Cimiano, 2008-01-31 The promise of the Semantic Web is that future web pages will be annotated not only with bright colors and fancy fonts as they are now but with annotation extracted from large domain ontologies that specify to a computer in a way that it can exploit what information is contained on the given web page The presence of this information will allow software agents to examine pages and to make decisions about content as humans are able to do now The classic method of building an ontology is to gather a committee of experts in the domain to be modeled by the ontology and to have this committee agree on which concepts cover the domain on which terms describe which concepts on what relations exist between each concept and what the possible attributes of each concept are All ontology learning systems begin with an ontology structure which may just be an empty logical structure and a collection of texts in the domain to be modeled An ontology learning system can be seen as an interplay between three things an existing ontology a collection of texts and lexical syntactic patterns The Semantic Web will only be a reality if we can create structured unambiguous ontologies that model domain knowledge that computers can handle The creation of vast arrays of such ontologies to be used to mark up web pages for the Semantic Web can only be accomplished by computer tools that can extract and build large parts of these ontologies automatically This book provides

the state of art of many automatic extraction and modeling techniques for ontology building The maturation of these techniques will lead to the creation of the Semantic Web
