Advances in Clinical Child Psychology Thomas H. Ollendick, Ronald J. Prinz, 2013-06-29 This nineteenth volume of *Advances in Clinical Child Psychology* continues our tradition of examining a broad range of topics and issues that characterizes the continually evolving field of clinical child psychology. Over the years the series has served to identify important exciting and timely new developments in the field and to provide scholarly and in depth reviews of current thought and practices. The present volume is no exception. In the opening chapter Sue Campbell explores developmental pathways associated with serious behavior problems in preschool children. Specifically she notes that about half of preschool children identified with aggression and problems of impulse control persist in their deviance across development. The other half do not. What accounts for these different developmental outcomes? Campbell invokes developmental and family influences as possible sources of these differential outcomes and in doing so describes aspects of her own programmatic research program that has greatly enriched our understanding of this complex topic. In a similar vein Sara Mattis and Tom Ollendick undertake a developmental analysis of panic in children and adolescents in Chapter 2. In recent years separation anxiety and experiences in separation from attachment figures in childhood have been hypothesized as playing a critical role in the development of panic. This chapter presents relevant findings in the areas of childhood temperament and attachment in addition to experiences of separation that might predispose a child to development of panic.

Basics of Child Neuropsychology Stephen R. Hooper, 2022-10-05 Written expressly for non neuropsychologists this book offers a concise friendly introduction to the developing brain and its functions. Stephen R. Hooper renders complex concepts accessible as he describes the structure of the brain and the workings of the nervous system. The book explains how findings from neuropsychological assessments can help educators and clinicians to better understand and remediate children's difficulties. A range of neurodevelopmental and medical conditions that affect learning and behavior from early childhood through adolescence are explored through a neuropsychological lens. Helpful features include key Take Home Points distilled from the chapters and recommended print and online resources.

Advances in Clinical Child Psychology Benjamin B. Lahey, 2013-11-11 Psychologists have long been interested in the problems of children but in the last 20 years this interest has increased dramatically. The intensified focus on clinical child psychology reflects an increased belief that many adult problems have their origin in childhood and that early treatment is often more effective than treatment at later ages but it also seems to reflect an increased feeling that children are inherently important in their own right. As a result of this shift in emphasis the number of publications on this topic has multiplied to the extent that even full time specialists have not been able to keep abreast of all new developments. Researchers in the more basic fields of child psychology have a variety of annual publications and journals to integrate research in their areas but there is a marked need for such an integrative publication in the applied segment of child and developmental psychology. *Advances in Clinical Child Psychology* is a serial

publication designed to bring together original summaries of the most important developments each year in the field Each chapter is written by a key figure in an innovative area of research or practice or by an individual who is particularly well qualified to comment on a topic of major contemporary importance Each author has followed the standard format in which his or her area of research was reviewed and the clinical implications of the studies were made explicit **Advances in Child Development and Behavior** Robert V. Kail, 2002-10-24 *Advances in Child Development and Behavior* is intended to ease the task faced by researchers instructors and students who are confronted by the vast amount of research and theoretical discussion in child development and behavior The serial provides scholarly technical articles with critical reviews recent advances in research and fresh theoretical viewpoints Volume 30 discusses early recall memory balance and motor learning sexual selection emotion related regulation maternal sensitivity and attachment and influences of friends
