Cytokines and Cancer Leonidas C. Plataniias,2006-05-06 Dramatic advances have occurred over the last few years in the research field of cancer biology There has been a constant accumulation of important new information resulting in a gradual transformation on the perceptions that exist among scientists regarding mechanisms by which the malignant phenotype develops The recent developments in cancer research have also had a substantial impact in efforts towards the development of new cancer therapies One of the most explosive and rapidly advancing research areas has been the area of cytokines and cancer Many perceptions have changed from the original discovery decades ago of the interferon to the current state of the art cytokine research It is now well recognized that many cytokines play important roles in normal cellular functions while some of them have prominent roles in the pathophysiology of cancer It is also now firmly established that several cytokines promote the growth of cancer cells while others act as suppressors of malignant cell proliferation The importance of the cytokine

signaling field in cancer is reflected by the development of multiple treatments that have been introduced in clinical oncology over the last few years Understanding the physiological functions of cytokines as well as their precise roles in the pathogenesis of certain malignancies is extremely important in the current clinical era *Circulating Tumor Cells, From Biotech Innovation to Clinical Utility Part B*, 2025-04-28 *Circulating Tumor Cells From Biotech Innovation to Clinical Utility Part B* Volume 392 in the International Review of Cell and Molecular Biology series highlights new advances in the field with this new volume presenting interesting chapters on a variety of timely topics including Circulating Tumor Cells in Lung Cancer integrating stemness and heterogeneity to improve clinical utility Multi omic Features and Clustering Phenotypes of Circulating Tumor Cells Associated with Metastasis and Clinical Outcomes CTCs in CRC updates Proteomics and post translational modification analysis in CTCs Latest advances of CTC studies in prostate cancer and Epigenetics and CTCs new biomarkers and impact on tumor biology Provides the latest information on cancer research Offers outstanding and original reviews on a range of cancer research topics Serves as an indispensable reference for researchers and students alike

RUNX Proteins in Development and Cancer Yoram Groner, Yoshiaki Ito, Paul Liu, James C. Neil, Nancy A. Speck, Andre van Wijnen, 2017-03-15 This volume provides the reader with an overview of the diverse functions of the RUNX family of genes As highlighted in the introduction and several of the 29 chapters humans and other mammals

have three RUNX genes that are known to play specific roles in blood bone and neuronal development However their evolutionary history has recently been traced back to unicellular organisms and their involvement in many well known signaling pathways Wnt TGFb Notch Hippo is indicative of a more general function in cell biology Their documented roles in cell fate decisions include control of proliferation differentiation survival senescence and autophagy The pleiotropic effects of RUNX in development are mirrored in cancer where RUNX genes can function as oncogenes that collaborate strongly with Myc family oncogenes or as tumour suppressor genes In the latter role they display hallmarks of both gatekeepers that modulate p53 responses and caretakers that protect the genome from DNA damage Several chapters focus on the importance of these genes in leukemia research where RUNX1 and CBFb are frequently affected by chromosomal translocations that generate fusion oncoproteins while recent studies suggest wider roles for RUNX modulation in solid cancers Moreover RUNX genes are intimately involved in the development and regulation of the immune system while emerging evidence suggests a role in innate immunity to infectious agents including HIV At the biochemical level the RUNX family can serve as activators or repressors of transcription and as stable mediators of epigenetic memory through mitosis Not surprisingly RUNX activity is controlled at multiple levels this includes miRNAs and a plethora of post translational modifications Several chapters highlight the interplay between the three mammalian RUNX genes where cross talk and partial functional redundancies are evident Finally structural analysis of the RUNX CBFb interaction has led to the development of small molecule inhibitors that provide exciting new tools to decipher the roles of RUNX in development and as targets for therapy This volume provides a compendium and reference source that will be of broad interest to cancer researchers developmental biologists and immunologists
