Atlas du réchauffement climatique Frédéric Denhez,Michel Petit,2007 Le moindre événement météorologique d'envergure tempête cyclone ou canicule et l'on invoque immédiatement le réchauffement de la planète Qu'en est-il exactement Le réchauffement est aujourd'hui une certitude Selon les prévisions du dernier rapport du Giec février 2007 la température moyenne de l'atmosphère sera en 2100 de 1,5 à 5,8°C plus chaude qu'aujourd'hui Et une partie essentielle de cette hausse est d'origine humaine Il importe de réagir avant qu'il ne soit trop tard Mais de quelle manière ? Alerter les politiques et former les comportements individuels changer de modèle de développement À chacun ses choix mais en connaissance de cause Tel est le pari de cet atlas À travers plus de 100 cartes graphiques et illustrations il explique très clairement les mécanismes du climat les signes du réchauffement températures et précipitations en hausse neiges et glaciers en diminution météorologies bouleversées migrations des animaux etc Cette nouvelle édition réalisée en partenariat avec l'ADEME Agence de l'environnement et de la maîtrise de l'énergie s'accompagne d'un supplément de 8 pages sur les conséquences de ce réchauffement pour la France à l'horizon 2100 et d'une grille permettant au lecteur de tester l'impact de ses comportements sur le climat Quel pays allons-nous laisser nos enfants Quel temps fera-t-il Marseille Lyon ou Dunkerque Que pourra-t-on désormais cultiver Une bonne manière peut-être de réaliser l'urgence du problème et la nécessité d'agir tout de suite tant au niveau individuel que collectif

Le réchauffement climatique : enjeu crucial du XXI^e siècle Frédéric Durand, 2020-02-18 Le réchauffement climatique est l'une des questions contemporaines les plus sensibles Un très large consensus international scientifique et politique a permis dès 1992 la mise en place d'un accord cadre de l'ONU sur le climat puis plus récemment la signature de l'Accord de Paris en 2015 ainsi que la déclaration d'une urgence écologique et climatique par l'Assemblée Nationale et le Sénat en France l'an 2019 De fait les mesures confirment une augmentation moyenne de la température de la planète de 1°C depuis un siècle et la multiplication des événements extrêmes Les modèles considèrent même que la poursuite de la croissance actuelle des sociétés technico-industrielles compromet fermement la viabilité de la plupart des sociétés Certains peuvent toutefois mettre en avant les incertitudes ou considérer qu'il pourrait ne pas s'agir que de phénomènes naturels Ce livre s'attaque de front cette apparente confusion afin de dégager les faits les arguments et les motivations Il aide à une quarantaine de figures et tableaux il se efforce d'analyser les changements pour voir dans la nature et pour l'humanité Il met aussi en lumière l'importance des réactions de la société civile ainsi que les pistes et moyens techniques ou institutionnels disponibles pour faire face aux enjeux Professeur de géographie à l'université Toulouse II Jean Jaurès et chercheur au laboratoire CNRS LISST UMR 5193 Frédéric Durand a écrit de nombreux ouvrages et articles sur les questions d'environnement Il travaille sur le réchauffement climatique depuis plus de vingt ans et a notamment rendu les pages sur ce sujet dans l'Atlas du Monde Diplomatique [Atlas du réchauffement climatique](#), 2021 [Atlas climatique de la France](#), 1981 [Le grand atlas du climat](#), 2023-11-15

[Atlas climatique de la France](#) France. Direction de la météorologie nationale, 1969 **Le climat: la terre et les hommes** Jean Poitou, 2015-01-08T00:00:00+01:00 Au cours de son histoire notre planète a connu des conditions climatiques très diverses Comment fonctionne la machine climatique Qu'est-ce que le climat global Pourquoi et comment a-t-il changé au cours des temps géologiques Comment se situe le changement climatique en cours dans ce contexte géologique et historique Le réchauffement en cours est marqué par des phases d'accélération et de ralentissement et des amplitudes différentes selon les régions Comment faire la part des facteurs naturels et des activités humaines dans ce réchauffement devant quels risques climatiques serons-nous amenés à faire face pour les prochaines décennies et les prochains siècles Les sciences du climat ont construit des méthodes d'observation d'analyse de modélisation et de reconstitution des climats passés qui permettent de répondre à ces questions Cet ouvrage clair et précis présente ainsi les acteurs du climat leurs interactions leurs changements avec toutes les composantes de l'environnement terrestre cet environnement qui est à la fois conditionné par le climat et affecte sa évolution Il en résulte un système qui connaît sa propre variabilité et peut produire des variations abruptes comme en témoignent les climats passés C'est également un système qui va réagir à des perturbations qu'elles soient naturelles ou liées à l'influence

humaine avec des mécanismes complexes de interactions. La modélisation du climat est donc centrale pour déchiffrer les causes des changements récents ou passés et pour anticiper les futurs possibles. Atlas du réchauffement climatique, Frédéric Denhez, 2007. **The Atlas of Climate Change**, Kirstin Dow, 2006. Atlas climatique de la France, 1974. **Le réchauffement climatique**, Kathleen Peterson, 2021-04-04. Les gaz effet de serre GES ont un rôle essentiel dans la régulation du climat. Sans eux la température moyenne sur Terre serait de 18°C au lieu de 14°C et la vie n'existerait peut-être pas. Toutefois depuis le XIXe siècle l'homme a considérablement accru la quantité de gaz effet de serre présents dans l'atmosphère. En conséquence l'équilibre climatique naturel est modifié et le climat se réajuste par un réchauffement de la surface terrestre. Nous pouvons déjà constater les effets du changement climatique. C'est pourquoi il convient de se mobiliser et d'agir. Tout le monde est concerné. Les acteurs économiques et citoyens pourraient remplir nos missions de gaz effet de serre mais aussi pour s'adapter aux changements déjà engagés. *Climat du Moyen Atlas tabulaire*, Abdelhak Bnoumoubarek (auteur d'un mémoire), 1986.
