and Probability with Applications for Engineers and Scientists Bhisham C. Gupta, Irwin Guttman, 2014-03-06

Introducing the tools of statistics and probability from the ground up. An understanding of statistical tools is essential for engineers and scientists who often need to deal with data analysis over the course of their work. *Statistics and Probability with Applications for Engineers and Scientists* walks readers through a wide range of popular statistical techniques, explaining step by step how to generate, analyze, and interpret data for diverse applications in engineering and the natural sciences. Unique among books of this kind, *Statistics and Probability with Applications for Engineers and Scientists* covers descriptive statistics first, then goes on to discuss the fundamentals of probability theory. Along with case studies, examples, and real-world data sets, the book incorporates clear instructions on how to use the statistical packages Minitab and Microsoft Office Excel to analyze various data sets. The book also features detailed discussions on sampling distributions, statistical estimation of population parameters, hypothesis testing, reliability theory, statistical quality control, including Phase I and Phase II control charts and process capability indices. A clear presentation of nonparametric methods and simple and multiple linear regression methods, as well as a brief discussion on logistic regression method. Comprehensive guidance on the design of experiments, including randomized block designs, one and two way layout designs, Latin square designs, random effects and mixed effects models, factorial and fractional factorial designs, and response surface methodology. A companion website containing data sets for Minitab and Microsoft Office Excel, as well as JMP routines and results. Assuming no background in probability and statistics, *Statistics and Probability with Applications for Engineers and Scientists* features a unique yet tried and true approach that is ideal for all undergraduate students as well as statistical practitioners who analyze

Cities Francisco Manzano Agugliaro, Alberto Jesús Perea Moreno, 2021-01-20 Climate change is increasing due to the anthropogenic emission of greenhouse gases The majority of these are due to the production and consumption of energy According to the latest estimates global energy demand could triple by 2050 and by then 70% of the world's population will live in cities The challenge for future cities is the implementation of a mechanism that minimizes the need for injection of new energy resources in them so that a high level of self sufficiency can be achieved through the concept of circular economy thus partially mitigating the impacts of climate change Using solar energy today is considered to be one of the best solutions that can be installed in buildings to help with this issue This book addresses several relevant aspects related to energy saving at cities including a deep survey of research topics and scientific collaborations in energy saving The main research topics carried out are related to sustainability solar energy the use of rooftops for energy generation energy conversion from urban biomass or residues wind energy and public and private urban energy saving Applied Statistics and Probability for Engineers, 7th Edition EPUB Reg Card Douglas C.
