Workflow Optimisation for Radiological Imaging Jie-Zhi Cheng, Minjeong Kim, Xin

Yang, 2024-10-28 Deep learning techniques have been shown to successfully address many medical image technical problems e.g. segmentation lesion detection image registration etc better than ever Accordingly the development of artificial intelligence AI applications in medicine is continuously booming in these years for the attempt to improve various image related medical procedures and workflows The applications aim to improve the workup of image diagnosis optimize the imaging workflow offload the tedious medical tasks and provide richer and more holistic cues for treatment planning Specific

prominent applications may range from lesion detections like pulmonary nodules and breast lesions cancer risk prediction triaging abnormality quantification and measurement disease staging quality control imaging improvement surgical therapy planning etc Thus far many commercial AI applications have been incorporated into clinical practice in this decade Meanwhile many promising clinical validation studies were also published in recent years with a vast amount of evaluation data across multiple institutes and countries With the further breakthrough of ChatGPT the trend of AI for medicine seems to be unstoppable and will persist in advancing However there are still plenty of unsolved or partially solved medical problems with which AI techniques may help
