Steven Connor,2019-04-03 **In the Shadow of the Machine** Jeremy Naydler,2018-05-29 Contemporary life is so deeply reliant upon digital technology that the computer has come to dominate almost every aspect of our culture What is the philosophical and spiritual significance of this dependence on electronic technology both for our relationship to nature and for the future of humanity And what processes in human perception and awareness have produced the situation we find ourselves in As Jeremy Naydler elucidates in this penetrating study we cannot understand the emergence of the computer without seeing it within the wider context of the evolution of human consciousness which has taken place over millennia Modern consciousness he shows has evolved in conjunction with the development of machines and under their intensifying shadow The computer was the product of a long historical development culminating in the scientific revolution of the 17th century It was during this period that the first mechanical calculators were invented and the project to create more complex thinking machines began in earnest But the seeds were sown many hundreds of years earlier deep in antiquity Naydler paints a vast panorama depicting human development and the emergence of electronic technology His painstaking research illuminates an urgent question that concerns every living person today What does it mean to be human and what if anything distinguishes us from machines *The Scientific Papers of James Clerk Maxwell, Edited by W. Quotations Carl C. Gaither,Alma E. Cavazos-Gaither,2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of

approximately 18 000 quotations related to a broad range of scientific topics The Scientific Correspondence of H.A. Lorentz A.J. Kox, 2008-09-18 This volume presents a selection of 434 letters from and to the Dutch physicist and Nobel Prize winner Hendrik Antoon Lorentz 1853 1928 covering the period from 1883 until a few months before his death in February 1928 The sheer size of the available correspondence approximately 6000 letters from and to Lorentz preclude a full publication The letters included in this volume have been selected according to various criteria the most important of which is scientific importance A second criterion has been the availability of letters both from and to Lorentz so that the reader can follow the exchange between Lorentz and his correspondent Within such correspondences a few unimportant items dealing with routine administrative or organizational matters have been omitted An exception to the scientific criterion is the exchange of letters between Lorentz and Albert Einstein Max Planck Woldemar Voigt and Wilhelm Wien during World War I these letters have been included because they shed important light on the disruption of the scientific relations during the war and on the political views of these correspondents as well as of Lorentz similar reasons the letters exchanged with Einstein and Planck on post war political issues have been included Biographical sketch Hendrik Antoon Lorentz was born on July 18 1853 in the Dutch town of Arnhem He was the son of a relatively well to do owner of a nursery
