Dohi,Ron Kikins,2003-06-30 The fifth international Conference in Medical Image Computing and Computer Assisted Intervention MICCAI 2002 was held in Tokyo from September 25th to 28th 2002 This was the first time that the conference was held in Asia since its foundation in 1998 The objective of the conference is to offer clinicians and scientists the opportunity to collaboratively create and explore the new medical field Specifically MICCAI offers a forum for the discussion of the state of art in computer assisted interventions medical robotics and image processing among experts from multi disciplinary professions including but not limited to clinical doctors computer scientists and mechanical and biomedical engineers The expectations of society are very high the advancement of medicine will depend on computer and device technology in coming decades as they did in the last decades We received 321 manuscripts of which 41 were chosen for oral presentation and 143 for poster presentation Each paper has been included in these proceedings in eight page full paper format without any differentiation between oral and poster papers Adherence to this full paper format along with the increased number of manuscripts surpassing all our expectations has led us to issue two proceedings volumes for the first time in MICCAI s history Keeping to a single volume by assigning fewer pages to each paper was certainly an option for us considering our budget constraints However we decided to increase the volume to offer authors maximum opportunity to argue the state of art in their work and to initiate constructive discussions among the MICCAI audience *Technical*

Addiction and Neurodegenerative Disorders Samer El

Hayek,2026-01-22 The brain regions and neuronal processes that underlie addiction extensively overlap with those needed for cognitive functions including learning memory and reasoning Addiction negatively impacts cognitive functions making it more challenging to maintain abstinence and potentially leading to progression into neurodegenerative disorders Furthermore individuals living with neurodegenerative disorders can engage in behaviors such as self medication due to impaired judgment and impulsivity associated with their condition Addressing either of these conditions becomes markedly more intricate when they co occur This book explores the intricate and often overlooked connection between neurodegenerative disorders and addiction It delves into the complex interplay between the two areas discussing preclinical to clinical findings that highlight commonalities shared risk factors causality comorbidity management and evidence based interventions By examining all these factors an international team of contributors offer a comprehensive understanding of
