Beyond Quasicrystals Francoise Axel, Denis Gratias, 2013-06-29 This book is the collection of most of the written versions of the Courses given at the Winter School Beyond Quasicrystals in Les Houches March 7 18 1994 The School gathered lecturers and participants from all over the world and was prepared in the spirit of a general effort to promote theoretical and experimental interdisciplinary communication between mathematicians theoretical and experimental physicists on the topic of the nature of geometric order in solids beyond standard periodicity and quasi periodicity The overall structure of the book reflects the wish of the editors to pose this fundamental question of geometric order in solids from both the experimental and theoretical point of view The first part is devoted more specifically to quasicrystals These materials were the common starting point of most of the audience and present a first concrete example of a non trivial geometric order We chose to focus on a few fundamental aspects of quasicrystals related to hidden symmetries in solids which are not easily found in standard textbooks on the topic not to reach an exhaustive survey which is already available elsewhere

Beyond Quasicrystals Françoise Axel, Denis Gratias, 1995 **Bibliographie nationale française**, 1998 **From Quasicrystals to More Complex Systems** F. Axel, F. Denoyer, J.P. Gazeau, 2013-06-29 This book is a collection of part of the written versions of the Physics Courses given at the Winter School Order Chance and Risk Aperiodic Phenomena from Solid State to Finance held at the Les Houches Center for Physics between February 23 and March 6 1998 The School gathered lecturers and participants from all over the world On a thematic level the content of the school can be viewed both as a continuation aperiodic phenomena in solid state physics and an extension mathematical aspects of finance and economy of the previous Beyond Quasicrystals also held at Les Houches March 7 18 1994 and published in the same series One of its important goals was to promote in depth concrete scientific exchanges between theoretical physicists experimental physicists and mathematicians on the one hand and on the other hand practitioners of the economic financial sphere and specialists of financial

mathematics Therefore besides the mathematical tools and concepts at work in theoretical descriptions relevant experimental data were also presented together with methods allowing their interpretation As a result of this choice the School was stimulated by experimentalists and financial market operators who joined the theoretical physicists and mathematicians at the conference The present volume deals with the theoretical and experimental studies on aperiodic solids with long range order incommensurate phases quasicrystals glasses and more complex systems fractal chaotic while a second volume to appear in the same series is devoted to the finance and economy facet **Deutsche**
