Rural People and Communities in the 21st Century David L. Brown, Kai A. Schafft, 2011-03-14 Rural people and communities continue to play important social economic and environmental roles at a time in which societies are rapidly urbanizing and the identities of local places are increasingly subsumed by flows of people information and economic activity across global spaces However while the organization of rural life has been fundamentally transformed by institutional and social changes that have occurred since the mid twentieth century rural people and communities have proved resilient in the face of these transformations This book examines the causes and consequences of major social and economic changes affecting rural communities and populations during the first decades of the twenty first century and explores policies developed to ameliorate problems or enhance opportunities Primarily focused on the U S context while also providing international comparative discussion the book is organized into five sections each of which explores both socio demographic and political economic aspects of rural transformation It features an accessible and up to date blend of theory and empirical analysis with each chapter s discussion grounded in real life situations through the use of empirical case study materials Rural People and Communities in the 21st Century is intended for advanced undergraduate and graduate courses in rural sociology community sociology rural and or population geography community development and population studies

Urbanism for a Difficult Future Korkut Onaran, 2022-09-29 Urbanism for a Difficult Future Practical Responses to the Climate Crisis is a much needed guide to launching the next generation of land use planning and urbanism that will enable us to adapt to and survive the consequences of climate change The book offers strong straightforward measures for creating a landscape of resilience via pockets of self sufficiencies It demonstrates how to secure systems that sustain life energy water food waste and production of essential goods as well as political and social protocols enabling agile decision making in managing these

systems effectively at local levels It also provides the design principles for creating a built environment that will enable the kind of localization we need for adaptation The book explores how it is possible to create a life that does not depend on large scale regional sustenance systems which are likely to be disrupted or fail This book uncovers how to enable people to be creative productive and supportive at local levels so that we can achieve strong and diverse local economies that can sustain life It will appeal to students planners and policy makers working in environmental studies environmental engineering urban and regional planning architecture landscape architecture and urbanism

Nanophysics of Solar and Renewable Energy
Edward L. Wolf, 2012-08-02 This easy accessible textbook provides an overview of solar to electric energy conversion followed by a detailed look at one aspect namely photovoltaics including the underlying principles and fabrication methods Ed Wolf an experienced author and teacher reviews such green technologies as solar heated steam power hydrogen and thermoelectric generation as well as nuclear fusion Throughout the book carefully chosen up to date examples are used to illustrate important concepts and research tools The opening chapters give a broad and exhaustive survey of long term energy resources reviewing current and potential types of solar driven energy sources The core part of the text on solar energy conversion discusses different concepts for generating electric power followed by a profound presentation of the underlying semiconductor physics and rounded off by a look at efficiency and third generation concepts The concluding section offers a rough analysis of the economics relevant to the large scale adoption of photovoltaic conversion with a discussion of such issues as durability manufacturability and cost as well as the importance of storage The book is self contained so as to be suitable for students with introductory calculus based courses in physics chemistry or engineering It introduces concepts in quantum mechanics atomic and molecular physics plus the solid state and semiconductor junction physics needed to attain a quantitative understanding of the current status of this field With its comments on economic aspects it is also a useful tool for those readers interested in a career in alternative energy

Beyond Politics Michael P. Vandenbergh, Jonathan M. Gilligan, 2017-12-21 This book argues that government action alone will not prevent dangerous climate change but that private governance can fill the gap

Climate Variability and Change in the Rift Valley and Blue Nile Basin, Ethiopia Abate Mekuriaw Bizuneh, 2013 This study deals with three interrelated problems First it pursues the quest for local knowledge to understand climate variability and change at local levels Due to controversies uncertainties skepticism and embedded economic and political interests in the climate change discourse effective world collective action is more likely to delay for quite some time to come Moreover as climate change discourse remains very weak at engaging local knowledge policies that emanate from the discourse might be less responsive to local climate problems both in terms of policy ingredients and time frame So having highlighting the paramount importance of local knowledge this study documents and critically analyzes this knowledge system among subsistence farmers in Ethiopia Secondly it analyzes the economic impacts of climate variability and change and adaptation through quantitative methods with a special focus on crop

production Finally it analyzes the factors that influence adaptive behavior In so doing it challenges the traditional approach of adaptation research and brings in a conceptual framework borrowed from psychosocial theory and empirically tests the approach in explaining adaptive behavior of farmers *Climate Change from the Streets* Michael Mendez,2020-01-07 An urgent and timely story of the contentious politics of incorporating environmental justice into global climate change policy Although the science of climate change is clear policy decisions about how to respond to its effects remain contentious Even when such decisions claim to be guided by objective knowledge they are made and implemented through political institutions and relationships and all the competing interests and power struggles that this implies Michael Mendez tells a timely story of people place and power in the context of climate change and inequality He explores the perspectives and influence low income people of color bring to their advocacy work on climate change In California activist groups have galvanized behind issues such as air pollution poverty alleviation and green jobs to advance equitable climate solutions at the local state and global levels Arguing that environmental protection and improving public health are inextricably linked Mendez contends that we must incorporate local knowledge culture and history into policymaking to fully address the global complexities of climate change and the real threats facing our local communities **The Role of the Government** Jacqueline

Langwith,2010-11-09 Author Jacqueline Langwith provides readers with a fact filled direct message about the role of the government when confronting global warming This volume explores government's role in addressing climate change on both a national and international level It discusses official recognition of climate change such as the Kyoto Protocol Readers will look at the United States historical responses to climate change and at efforts to regulate carbon dioxide and reduce emissions through a carbon tax and renewable fuel standard Readers will explore energy efficient building land use policies and efforts to maintain biological diversity *Innovations in Environmental Legislation and Justice: Environmental and Water-Energy-Food Nexus Laws* Norouzi, Nima,Movahedian, Hussein,2023-04-12 Human health has been protected from environmental contamination by national laws throughout history but there are still many areas of international environmental law that are underdeveloped Even though numerous international environmental treaties have been established effective agreements remain difficult to achieve for a variety of reasons Because environmental problems disregard political boundaries they can only be adequately addressed by a wide range of governments some of which may have serious disagreements on important points of policy The knowledge gap between legal developments designed to achieve environmental objectives and the practical scientific and technical applications must be bridged Environmental and energy law should be explored from a wide range of perspectives and approaches to gain insight into how the law is designed to tackle particular environmental problems *Innovations in Environmental Legislation and Justice: Environmental and Water Energy Food Nexus Laws* examines the development and application of international environmental laws and regulations dealing with global air water and land pollution By adopting a multi disciplinary approach to environmental and energy law

the book embraces all readerships and goes a step further to address the often thorny problem of improving communication between scientists and engineers and law and policymakers Covering topics such as environmental justice green constitutions and climate change this book is ideal for policymakers government officials legal professionals environmentalists students academicians researchers and more

Science, Risk, and Policy Andrew J. Knight, 2016-04-14 For decades experts and the public have been at odds over the nature and magnitude of risks and how they should be mitigated through policy Experts argue that the fears of the public are irrational and that public policy should be based on sound science The public on the other hand is skeptical of experts and believe policy should represent their interests How do policy analysts make sense of these competing views Science Risk

and Policy answers this question by examining how people evaluate evidence how science is conducted and how a multi disciplinary framework to risk can inform policy by bridging the gap between experts and the public This framework is then applied to four case studies pesticides genetically engineered foods climate change and nuclear power By tracing the history of the science policies and regulations and evaluating arguments made about these risks Andrew J Knight provides a guide to understand how experts and the public view risks

A Companion to the Anthropology of Environmental Health Merrill Singer, 2016-04-05 A Companion to the Anthropology of Environmental Health presents a collection of readings that utilize a medical anthropological approach to explore the interface of humans and the environment in the shaping of health and illness around the world Features the latest ethnographic research from around the world related to the multiple impacts of the environment on health and of societies on their environments Includes contributions from international medical anthropologists conservationists environmental experts public health professionals health clinicians and other social scientists Analyzes the conditions of cultural and social transformation that accompany environmental and ecological impacts in all areas of the world Offers critical perspectives on theoretical and methodological advancements in the anthropology of environmental health along with future directions in the field

The Anthropocene and the Global Environmental Crisis Clive Hamilton, François Gemenne, Christophe Bonneuil, 2015-05-15 The Anthropocene in which humankind has become a geological force is a major scientific proposal but it also means that the conceptions of the natural and social worlds on which sociology political science history law economics and philosophy rest are called into question The Anthropocene and the Global Environmental Crisis captures some of the radical new thinking prompted by the arrival of the Anthropocene and opens up the social sciences and humanities to the profound meaning of the new geological epoch the Age of Humans Drawing on the expertise of world recognised scholars and thought provoking intellectuals the book explores the challenges and difficult questions posed by the convergence of geological and human history to the foundational ideas of modern social science If in the Anthropocene humans have become a force of nature changing the functioning of the Earth system as volcanism and glacial cycles do then it means the end of the idea of nature as no more than the inert backdrop to the drama of human affairs It means the end of the social only understanding of human history and agency These pillars of modernity are now destabilised The scale and pace of the shifts occurring on Earth are beyond human experience and expose the anachronisms of Holocene thinking The book explores what kinds of narratives are emerging around the scientific idea of the new geological epoch and what it means for the politics of unsustainability

Green Chemistry and Engineering Anne E. Marteel-Parrish, Martin A. Abraham, 2013-11-11 Promotes a green approach to chemistry and chemical engineering for a sustainable planet With this text as their guide students will gain a new outlook on chemistry and engineering The text fully covers introductory concepts in general organic inorganic and analytical chemistry as well as biochemistry At the same time it integrates such concepts as greenhouse gas potential alternative and renewable energy solvent selection and recovery and

ecotoxicity As a result students learn how to design chemical products and processes that are sustainable and environmentally friendly Green Chemistry and Engineering presents the green approach as an essential tool for tackling problems in chemistry A novel feature of the text is its integration of introductory engineering concepts making it easier for students to move from fundamental science to applications Throughout this text the authors integrate several features to help students understand and apply basic concepts in general chemistry as well as green chemistry including Comparisons of the environmental impact of traditional chemistry approaches with green chemistry approaches Analyses of chemical processes in the context of life cycle principles demonstrating how chemistry fits within the complex supply chain Applications of green chemistry that are relevant to students lives and professional aspirations Examples of successful green chemistry endeavors including Presidential Green Chemistry Challenge winners Case studies that encourage students to use their critical thinking skills to devise green chemistry solutions Upon completing this text students will come to understand that chemistry is not antithetical to sustainability but rather with the application of green principles chemistry is the means to a sustainable planet

Reflecting on our Changing Climate, from Fear to Facts Constantin Cranganu, 2024-03-07 This book contains reflections about climate change an intrinsic reality of our planet s history over the past 4 6 billion years including both natural and anthropogenic variations More recently the phrase climate change has become a euphemism for carbon dioxide emissions While focusing on CO₂ emissions is crucial for understanding climate change solely using this term in scientific discussions may lead to overlooking other complex factors contributing among other things to extreme weather events potentially affecting the quality of evidence analysis The shift towards using climate change interchangeably with carbon dioxide emissions within scientific circles while highlighting a key driver necessitates ensuring comprehensive discussions that encompass the diverse evidence related to all climate sub systems Therefore using the phrase like a changing climate opens a bigger umbrella that facilitates covering multiple and complex climate manifestations The book will be useful to students researchers and policy makers working and studying in the vast and often contentious landscape of climate change debates

Critical Perspectives on Fossil Fuels vs. Renewable Energy Anne C. Cunningham, 2016-12-15 Renewable energy is one of the fastest growing sectors in the global economy as climate scientists and environmentalists give voice to the detrimental effects of fossil fuels But how far have we gotten in developing efficient and sustainable energy including solar wind and geothermal power and what are the benefits of these renewable energy sources compared to fossil fuels This text examines the issue from diverse viewpoints allowing students to analyze key ideas in energy production through primary source evidence
