Nuclear Energy ,1995 HIV Infections and Zoonoses Paolo Pasquali, Food and Agriculture Organization of the United Nations, 2004 Infections between animals and humans are truly complex and health care providers should be aware of the potential role of animals in infectious diseases of HIV infected patients The aim of this guideline is to outline the most important zoonoses that play a significant role in the epidemiology of AIDS and to provide a practical and manageable tool for health workers involved in the care of HIV infected humans **Control of contagious bovine pleuropneumonia - A policy for coordinated actions** Food and Agriculture Organization of the United Nations, 2019-03-27 Contagious bovine pleuropneumonia CBPP is an insidious disease that lingers in herds causing significant morbidity and mortality The policies to address the control and management of CBPP are in disarray at both the national and international levels There has not been significant improvement in the efficacies of available vaccines or diagnostic assays for several decades Classic strategies of mass vaccination and strict movement control that once were perceived as successful in rolling back the disease have largely fallen due to high costs concerns of declining impact and growing public resistance Officially treatment with antibiotics is discouraged or prohibited yet their use is widespread CBPP is by all means an enigmatic disease whose control probably requires a new paradigm or out of the box thinking and executing approach The purpose of this document is to provide an evidence based policy for the implementation of sound control of CBPP by all stakeholders at all levels global regional and national It describes a road map to CBPP control that is cognizant of the situation on the ground While not being prescriptive the document includes examples of combinations of interventions and control measures that should offer the opportunity to improve impact and hence offer better livelihoods to livestock producers *Seloc Mercury/Mariner Outboards, 1990-00 Repair Manual* Scott A. Freeman, 1900 **Pastoralism - Making variability work** Food and Agriculture Organization of the United Nations, 2021-07-21 Pastoral systems have evolved to function with the natural environment and therefore with variability By identifying variability as an entry point this paper aims at i engaging FAO in the mainstreaming of pastoralism by establishing the understanding of pastoralism and its systematic inclusion in the normal operations of FAO and at ii presenting an evidence based narrative on pastoralism to a specialists audience Two main points are made in this document First pastoral systems are emblematic of farming with nature Second pastoral systems make use of variability in inputs the environment by matching it with variability in their own operational processes flexibility in movements animal breeds labour force etc in such a way as to reduce the variability in outputs animal production and health household s food security etc Since 2015 the Pastoralist Knowledge Hub PKH has helped creating an institutional space for connecting and coordinating work on pastoralism within FAO An Inter Departmental Working Group on Pastoralism has been formed The conceptual framework of this paper and early versions have benefited from comments and guidance of FAO staff as well as of specialists of pastoralism worldwide **Animal nutrition strategies and options to reduce the use of**

antimicrobials in animal production Food and Agriculture Organization of the United Nations,2021-07-15 Antimicrobial resistance is a global and increasing threat Stewardship campaigns have been established and policies implemented to safeguard the appropriate use of antimicrobials in humans animals and plants Restrictions on their use in animal production are on the agenda worldwide Producers are investing in measures involving biosecurity genetics health care farm management animal welfare and nutrition to prevent diseases and minimize the use of antimicrobials Functional animal nutrition to promote animal health is one of the tools available to decrease the need for antimicrobials in animal production Nutrition affects the critical functions required for host defence and disease resistance Animal nutrition strategies should therefore aim to support these host defence systems and reduce the risk of the presence in feed and water of potentially harmful substances such as mycotoxins anti nutritional factors and pathogenic bacteria and other microbes General dietary measures to promote gastrointestinal tract health include the selective use of a combination of feed additives and feed ingredients to stabilize the intestinal microbiota and support mucosal barrier function This knowledge used to establish best practices in animal nutrition could allow the adoption of strategies to reduce the need for antimicrobials and contain antimicrobial resistance Small Ruminant Production and the Small Ruminant Genetic Resource in Tropical Africa R.
