still relatively rare This research topic is intended to encourage more relevant projects to be published This research topic aims to encourage researchers to use biomechanical performance to design advanced physical medicine and rehabilitation approaches evaluate the effectiveness of the rehabilitation approaches and explore the mechanisms by which rehabilitation approaches work for neuromusculoskeletal disorders Some studies have developed stretching approaches for the rehabilitation of knee osteoarthritis in older adults by measuring biomechanical performance during functional activities Some studies indicated that the mechanism of physical activity to reduce falls in older adults lies in its effectiveness in increasing proprioceptive sensitivity and further indicated that rehabilitation of proprioception may be a key to reducing falls in the fall prone older adult population Some other studies analyzed biomechanical performance in ankle ligament injuries to understand when how and why ligaments fail As a result this research topic will expand the application of biomechanical performance to better understand and treat neuromusculoskeletal disorders
