Atlas Of Pediatric Cardiac Surgery:

Atlas of Pediatric Cardiac Surgery Constantine Mavroudis, Carl Lewis Backer, 2015-10-24 The raison d'être for a new atlas of congenital heart surgery is based on the reality that the specialty has undergone numerous changes in the last few years resulting in improved techniques and new operations. The sheer number of new procedures and the required attendant technical skills to successfully complete an operation has become a challenge to master especially for residents who are pursuing a career in congenital heart surgery. While the techniques that we are espousing are mostly our own, there is a great deal of similarity amongst international centers owing to the influence of video presentations, manuscript publications, and chapter reviews. We therefore believe that the techniques that are illustrated in this atlas are likely to be similar to the techniques that are taught worldwide to residents and fellows. The atlas is organized generally by diseases and procedures pertaining thereto. Two general sections involve cannulation techniques and palliative procedures respectively. A special section depicts difficult problems in the form of clinical vignettes that may arise during cardiopulmonary bypass such as decreased venous return, undiagnosed patent ductus arteriosus, and technical errors leading to hemodynamic complications. The reader is instructed to apply measures that will lead to resolution of these problems. We have chosen procedures which cover the breadth of congenital heart surgery. While perhaps not totally inclusive, the reader will find the greater majority of congenital heart procedures illustrated and explained in this text.

Pediatric Cardiac Surgery Constantine Mavroudis, Carl L. Backer, 2013-02-04 Pediatric cardiac surgery is a dynamic, fast-moving field. Busy practitioners like you need clear and comprehensive guidance you can rely on to ensure optimal patient care. For over 25 years *Pediatric Cardiac Surgery* has been the gold standard reference for pediatric and adult congenital heart surgeons, pediatric and congenital cardiologists, intensivists, anesthesiologists, residents, and nurses. Now in this thoroughly revised fourth edition, you again get trusted, complete coverage of the field with timely new features and expert reviews of critical topics including heart transplantation, emerging modalities for diagnosing congenital heart and tracheal defects, the surgical technique of Fontan conversion with arrhythmia surgery, the medical challenges of managing adult CHD patients, and more. This new edition includes contributions from over 65 world-renowned experts. More beautiful illustrations by renowned medical illustrator Rachid Idriss, which have brought acclaim to previous editions. Reviews of the embryology, physical findings, diagnostic criteria, and therapeutic choices for each disease entity, and describes the latest in surgical techniques in each chapter. All new chapters that guide readers through new treatment options and other key developments since the publication of the third edition, highlighting recent advances in congenital heart surgery. All new chapters that review advances in right ventricular to pulmonary artery conduits, arrhythmia surgery, double outlet ventricles, and adult congenital heart disease among other key topics.

National Library of Medicine Audiovisuals Catalog National Library of Medicine (U.S.), *Transesophageal Echocardiography for Pediatric and Congenital Heart Disease* Pierre C. Wong, Wanda C. Miller-Hance, 2021-07-17 This extensively revised textbook reviews the use of transesophageal echocardiography TEE in pediatric and young adult patients with cardiac disease It reviews how TEE has made a vital contribution to these patients successful and continually improving clinical outcomes enabling them to live well into adulthood The book details the evolving technology and applications of TEE including three dimensional TEE describing how this imaging approach remains at the forefront of clinical practice for pediatric patients and those with congenital heart disease CHD Transesophageal Echocardiography for Pediatric and Congenital Heart Disease represents a unique contribution as the only contemporary text to focus exclusively on the clinical application of TEE in children and all patients with CHD Written by numerous prominent specialists in the field it presents a comprehensive modern and integrated review of the subject Specific chapter topics include the physics and instrumentation of TEE structural and functional evaluation and

specialized aspects of the examination with emphasis on the technical considerations pertinent to both pediatric and adult patients with a variety of congenital and acquired cardiovascular pathologies. Consequently, it serves as a comprehensive reference for the TEE evaluation of CHD utilizing the segmental approach to diagnosis and discussing the TEE evaluation of the many anomalies encompassing the CHD spectrum. In addition, numerous other relevant topics are discussed, including application of TEE for perioperative and interventional settings. The book is richly illustrated with many chapters supplemented by illustrative case studies and accompanying videos. A specific section with multiple choice questions and answers is provided at the end of each chapter to reinforce key concepts. This textbook therefore provides an invaluable and indispensable resource for all trainees and practitioners using TEE in the management of CHD and pediatric patients.

Finding the Way Dr. Constantine Mavroudis, 2024-01-17 About the Book Dr. Mavroudis was born in Thasos, Greece, in July of 1946. He spent the first year of his life in his birthplace before immigrating to the United States with his family in 1947. In his inspiring extraordinary memoir, Dr. Mavroudis recounts his youth in New Jersey with his parents making a living through a luncheonette, ice cream parlor, and his rise to become one of the most world-renowned pediatric congenital heart surgeons. Dr. Mavroudis established the second successful neonatal cardiac transplant program in the world. He made many scientific and clinical contributions to the field by his research, multiple publications, his numerous editions of his textbook *Pediatric Cardiac Surgery*, now in its 5th Edition, and educating the next generation of surgeons, including his own son. *Finding the Way* is the tale of resourcefulness, hard work, and where humble beginnings lead to extraordinary endings. About the Author Dr. Constantine Mavroudis graduated from the University of Virginia School of Medicine in 1973 and completed General Surgery Training in 1973, Thoracic Cardiovascular Training in 1979, and was a Research Fellow in 1976 and 1977, all at the University of California, San Francisco. His first faculty position was at the University of Louisville School of Medicine in 1981, where he became Chief of Pediatric Cardiac Surgery and rose to the rank of Professor of Surgery. He was recruited to Children's Memorial Hospital, Northwestern University, the Feinberg School of Medicine, in 1989 as the Wills J. Potts Professor of Surgery, Division Director of Pediatric Cardiac Surgery, and Surgeon in Chief. During 2008-2011, Dr. Mavroudis was chair of the Department of Pediatric and Congenital Heart Surgery with a joint appointment in the Department of Bioethics at the Cleveland Clinic. During 2012-2019, he was Director of Congenital Heart Surgery, AdventHealth for Children in Orlando, and Professor of Surgery, Johns Hopkins University School of Medicine. In 2020, he became Professor Emeritus of Surgery, Johns Hopkins University School of Medicine, and was recruited to Peyton Manning Children's Hospital in Indianapolis as Chief of Pediatric Cardiothoracic Surgery. Dr. Mavroudis spends his leisure time training for athletic events. He has completed eleven marathons, eighty-five Olympic distance triathlons, and fifteen 70.3 Ironman Triathlons in the United States, Europe, and Africa. He and his family enjoy fishing trips, winery visits, SCUBA adventures, and sailing vacations. Dr. Mavroudis is happily married forty years to the former Martha Smith of Louisville, Kentucky. Together, they have two children, Paula and Constantine.

focuses on the ethical and social aspects related to pediatric and congenital heart surgery. The surgical procedures required for the repair of congenital heart malformations are frequently seen as only a technical problem limited to cut and stitch. On the contrary, there are endless aspects to take into consideration from the communications with the child patient unless he/she is a neonate or small infant and his/her family trust building with the family, the ethical issues related to the choice of type and timing among the available surgical options in relationship to the needs of the patient and his/her family and their cultural and socioeconomic environment, the impact of the differences in culture, education, religion, socioeconomic situation, the balance between risks and potential benefits in complex operations without any margin for error, the information to the patient and his/her family of the potential early and late complications including death, the involvement of teamwork required for each procedure with members of a large team not directly under control by the surgeon with potential mistakes and omissions by any member of the team, the way of sharing bad results and the support to the family in the case of poor outcomes. While a few books deal partly with some of these aspects, this is the first work entirely dedicated to address them all. This important and unique work draws on the author's many years of experience in many different hospitals in different countries and continents. Key audiences include the very large number of families of children who underwent or need to undergo surgery for a congenital heart defect, all the caregivers and practitioners involved with the management of these patients and all researchers and students dealing with the topic of heart malformations.

Pediatric Cardiology Robert H. Anderson, Carl L. Backer, Stuart Berger, Nico A. Blom, Ralf J. Holzer, Joshua D. Robinson, 2024-08-05. This reference work aims to be the primary resource in the field of heart disease in children and adult congenital heart disease. It contains nearly 100 chapters covering all aspects of heart disease in three populations: fetus with acquired and congenital heart diseases, children with acquired and congenital heart diseases, and adults with congenital heart diseases. Divided into five main sections, the book provides a comprehensive up-to-date and continuously revised overview of what is known in the field as well as resources for practical use such as normal values, medication information, and review of published guidelines. The first section of the book includes historical background on congenital heart disease and the evolution of medical, surgical, and catheter therapeutics. The fetal heart disease section comes next and covers cardiovascular embryogenesis, etiological mechanisms, diagnostic tools, presentation, and management. Cardiomyopathies, arrhythmias, perinatal management, and emergencies. The bulk of the book lies in the third section on pediatric cardiology, which examines not only basic science, assessment, and therapies but also a wide variety of specific acquired and congenital diseases such as valvular lesions, arterial diseases, cyanotic heart diseases, cardiomyopathies, cardiac tumors, and pulmonary hypertension. This is followed by the section on adult congenital heart diseases, discussing echocardiography, electrophysiology, neurodevelopment, and a variety of unique aspects of congenital heart disease in the adult years. The final section of the book focuses on pharmacology with chapters on inotropes, vasopressors, diuretics, and more.
