Air Force and Space Digest, 1996 *Moon Lander* Thomas J. Kelly, 2012-01-11 Chief engineer Thomas J. Kelly gives a firsthand account of designing building testing and flying the Apollo lunar module It was he who wrote an aerospace engineer's dream job of the century Kelly's account begins with the imaginative process of sketching solutions to a host of technical challenges with an emphasis on safety reliability and maintainability He catalogs numerous test failures including propulsion system leaks ascent engine instability stress corrosion of the aluminum alloy parts and battery problems as well as their fixes under the ever present constraints of budget and schedule He also recaptures the exhilaration of hearing Apollo 11's Neil Armstrong report that The Eagle has landed and the pride of having inadvertently provided a vital lifeboat for the crew of the disabled Apollo 13 **Heritage Auctions Space Exploration Auction Catalog #6007** Marsha Dixey, 2008-09 *Air Force Magazine*, 2004 *The Strategic Leader's Roadmap, Revised and Updated Edition* Harbir Singh, Michael Useem, 2021-10-26 In *The Strategic Leader's Roadmap Updated and Revised Edition* 6 Steps for Integrating Leadership and Strategy Wharton management professors Harbir Singh and Michael Useem offer a six point checklist for today's leaders to follow They explain how leading strategically will help managers strengthen their capacity to develop strategy and to lead its execution **Leadership Dispatches** Michael Useem, Howard Kunreuther, Erwann Michel-Kerjan, 2015-03-11 On February 27 2010 Chile was rocked by a violent earthquake five hundred times more powerful than the one that hit Haiti just six weeks prior The Chilean earthquake devastated schools hospitals roads and homes paralyzing the country for weeks and causing economic damage that was equal to 18 percent of Chile's GDP This calamity hit just as an incumbent political regime was

packing its bags and a new administration was preparing to take office. For most countries it would have taken years if not decades to recover from such an event. Yet only one year later Chile's economy had reached a six percent annual growth rate. In *Leadership Dispatches*, Michael Useem, Howard Kunreuther, and Erwann Michel Kerjan look at how the nation's leaders in government, business, religion, academia, and beyond facilitated Chile's recovery. They attribute Chile's remarkable comeback to a two-part formula consisting of strong national leadership on the one hand and deeply rooted institutional practices on the other. Coupled with strategic deliberative thinking, these levers enabled Chile to bounce back quickly and exceed its prior national performance. The authors make the case that the Chilean story contains lessons for a broad range of organizations and governments the world over. Large-scale catastrophes of many kinds, from technological meltdowns to disease pandemics, have been on the rise in recent years. Now is the time to seek ideas and guidance from other leaders who have triumphed in the wake of a disaster. In this vein, *Leadership Dispatches* is both a remarkable story of resilience and an instructive look at how those with the greatest responsibility for a country, company, or community should lead.

NASA 50th Anniversary Proceedings: NASA's First 50 Years: Historical Perspectives Steven J. Dick, National Aeronautics and Space Administration, 2010-07-07

On 29 July 1958, President Dwight D. Eisenhower signed the National Aeronautics and Space Act, creating the National Aeronautics and Space Administration (NASA), which became operational on 1 October of that year. Over the next 50 years, NASA achieved a set of spectacular feats ranging from advancing the well-established field of aeronautics to pioneering the new fields of Earth and space science and human spaceflight. In the midst of the geopolitical context of the Cold War, 12 Americans walked on the Moon, arriving in peace for all mankind. Humans saw their home planet from a new perspective with unforgettable Apollo images of Earthrise and the Blue Marble, as well as the pale blue dot from the edge of the solar system. A flotilla of spacecraft has studied Earth, while other spacecraft have probed the depths of the solar system and the universe beyond. In the 1980s, the evolution of aeronautics gave us the first winged human spacecraft, the Space Shuttle, and the International Space Station stands as a symbol of human cooperation in space, as well as a possible way station to the stars. With the Apollo fire and two Space Shuttle accidents, NASA has also seen the depths of tragedy. In this volume, a wide array of scholars turn a critical eye toward NASA's first 50 years, probing an institution widely seen as the premier agency for exploration in the world, carrying on a long tradition of exploration by the United States and the human species in general. Fifty years after its founding, NASA finds itself at a crossroads that historical perspectives can only help to illuminate.
