This comprehensive text provides the reader with both a detailed reference and a unified course on wastewater treatment Aimed at scientists and engineers it deals with the environmental and biological aspects of wastewater treatment and sludge disposal The book starts by examining the nature of wastewaters and how they are oxidized in the natural environment An introductory chapter deals with wastewater treatment systems and examines how natural principles have been harnessed by man to treat his own waste in specialist reactors The role of organisms is considered by looking at kinetics metabolism and the different types of micro organisms involved All the major biological process groups are examined in detail in highly referenced chapters they include fixed film reactors activated sludge stabilization ponds anaerobic systems and vegetative

processes Sludge treatment and disposal is examined with particular reference to the environmental problems associated with the various disposal routes A comprehensive chapter on public health looks at the important waterborne organisms associated with disease as well as removal processes within treatment systems Biotechnology has had an enormous impact on wastewater treatment at every level and this is explored in terms of resource reuse biological conversion processes and environmental protection Finally there is a short concluding chapter that looks at the sustainability of waste water treatment The text is fully illustrated and supported by over 3000 references a Journal of the Institution of Engineers (India) ,1977

book deals with natural treatment systems and the challenges the water industry faces in dealing with sustainability and the
realisation of reaching Net Zero by 2030 Surface waters are all under threat with freshwater ecosystems now facing
unprecedented levels of contamination even after a century of ever stricter legislation and regulation The increase in
population and especially in urbanization without sufficient planning and investment to ensure adequate wastewater
collection and treatment coupled with the need to reduce greenhouse gas emissions associated with wastewater treatment is
leading to a crisis in wastewater treatment in many countries Natural treatment systems which use plants and soil micro
organisms are very much nature based solutions and wherever applicable might offer sustainable and low emissions options
for a range of wastewater problems protecting surface waters as well as creating new habitats to support and enhance
wildlife diversity In terms of circularity natural treatment systems have the potential to produce a staggering array of useful
and valuable by products including high value compounds for the pharmaceutical industry Related Link s
