Kuranishi Structures and Virtual Fundamental Chains Kenji Fukaya,Yong-Geun Oh,Hiroshi Ohta,Kaoru Ono,2020-10-16 The package of Gromov s pseudo holomorphic curves is a major tool in global symplectic geometry and its applications including mirror symmetry and Hamiltonian dynamics The Kuranishi structure was introduced by two of the authors of the present volume in the mid 1990s to apply this machinery on general symplectic manifolds without assuming any specific restrictions It was further amplified by this book s authors in their monograph Lagrangian Intersection Floer Theory and in many other publications of theirs and others Answering popular demand the authors now present the current book in which they provide a detailed self contained explanation of the theory of Kuranishi structures Part I discusses the theory on a single space equipped with Kuranishi structure called a K space and its relevant basic package First the definition of a K space and maps to the standard manifold are provided Definitions are given for fiber products differential forms partitions of unity and the notion of CF perturbations on the K space Then using CF perturbations the authors define the integration on K space and the push forward of differential forms and generalize Stokes formula and Fubini s theorem in this framework Also virtual fundamental class is defined and its cobordism invariance is proved Part II discusses the compatible system of K spaces and the process of going from geometry to homological algebra Thorough explanations of the extension of given perturbations on the boundary to the interior are presented Also explained is the process of taking the homotopy limit needed to handle a system of infinitely many moduli spaces Having in mind the future application of these chain level constructions beyond those already known an axiomatic approach is taken by listing the properties of the system of the relevant moduli spaces and then a self contained account of the construction of the associated algebraic structures is given This axiomatic approach makes the exposition contained here independent of previously published construction of relevant structures
