**ARBURG Practical Guide to Injection Moulding** Vannessa Goodship, 2017-02-27 This book details the factors involved in the injection moulding process from material properties and selection to troubleshooting faults and includes the equipment types currently in use and machine settings for different types of plastics Material flow is a critical parameter in moulding and there are sections covering rheology and viscosity High temperature is also discussed as it can lead to poor quality mouldings due to material degradation The text is supported by 74 tables many of which list key properties and processing parameters and 233 figures there are also many photographs of machinery and mouldings to illustrate key points Troubleshooting flow charts are also included to indicate what should be changed to resolve common problems Injection moulding in the Western World is becoming increasingly competitive as the manufacturing base for many plastic materials has moved to the East Thus Western manufacturers have moved into more technically difficult products and mouldings to provide enhanced added value and maintain market share Technology is becoming more critical together with innovation and quality control There is a chapter on advanced processing in injection moulding covering multimaterial and assisted moulding technologies This guide will help develop good technical skills and appropriate processing techniques for the range of plastics and products in the marketplace Every injection moulder will find useful information in this text in addition this book will be of use to experts looking to fill gaps in their knowledge base as well as those new to the industry ARBURG has been manufacturing injection moulding machines since 1954 and is one of the major global players The company prides itself on the support offered to clients which is exemplified in its training courses This book is based on some of the training material and hence is based on years of experience

**CO2 Emission Mitigation Through Energy Conservation - A Practical Guide** Dr. M. Thirugnana Sambandam, 2017-01-01 There is a need for a text book containing practical case studies in the subject of energy conservation and associated CO2 emission mitigation for UG PG level engineering and science students This book is written keeping in mind the application part of engineering knowledge and skills so that learners and practicing engineers can really apply the techniques in the field Application of engineering principles and the methodology of integrating with practice in reducing CO2 emission are presented in this maiden edition The first chapter provides an insight into the nexus between energy consumption and CO2 emission and the needed for mitigation In Chapter 2 a detailed survey is presented to highlight the need of energy conservation and the achievements made The application of numerical tools for critical analysis of energy systems to quantify energy consumption and CO2 emission mitigation potential are reviewed and presented Detailed discussions on energy Audit emission estimation methodology are enumerated in Chapter 3 to motivate the readers to understand and apply these strategies in the industrial environment The cases of paper based industry cement spice powder and electronic contactors manufacturing industry are discussed for better understanding in chapters 4 5 6 7 In chapter 8 the application of numerical method Computational Fluid Dynamics CFD to pressure drop analysis in compressed

air pipe junctions T and elbow are discussed with simulation results for energy and CO2 emission reduction A brief introduction is presented on carbon capture in chapter 9 This book will be an eye opener for the readers looking for a career in the domain of Green Manufacturing and serve as a hand book for practicing engineers
