an invaluable resource for graphic presentation techniques ranging from traditional hand drawing to advanced computer graphics. It features an amazingly wide range of examples including both student work and professional work by renowned architects. With the addition of a new chapter on portfolio design, this new edition illustrates the full gamut of graphic communication skills from the conceptual sketch through the documentation of the final portfolio. Mark A. Pearson, AIA, LEED AP, Associate Professor of Architecture, College of DuPage. This book should be in the library of all architecture and design students as well as practicing professionals. The richness and variety of hand-drawn and digital illustrations by students and architects offers deep insight into the many drawing types and methods used today. The section on portfolios is a helpful and timely addition. Professor Michael Hagge, Chair, Department of Architecture, The University of Memphis.

Representation of Places Peter Bosselmann, 1998-03-21. People live in cities and experience them firsthand while urban designers explain cities conceptually. In *Representation of Places*, Peter Bosselmann takes on the challenging question of how designers can communicate the changes they envision in order that the rest of us adequately understand how those changes will affect our lives. New modes of imaging technology from two-dimensional maps, charts, and diagrams to computer models allow professionals to explain their designs more clearly than ever before. Although architects and planners know how to read these representations, few outside the profession can interpret them, let alone understand what it would be like to walk along the streets such representations describe. Yet decisions on what gets built are significantly influenced by these very representations. A portion of Bosselmann's book is based on innovative experiments conducted at the University of California Berkeley's Visual Simulation Laboratory. In a section titled *The City in the Laboratory*, he discusses how visual simulation was applied to projects in New York City, San Francisco, and Toronto. The concerns that Bosselmann addresses have an impact on large segments of society and lay readers as well as professionals will find much that is useful in his timely, accessibly written book.

Building, 1887. *Handbook of Research on Form and Morphogenesis in Modern Architectural Contexts* D'Uva, Domenico, 2018-02-23. As architectural designs continue to push boundaries, there is more exploration into the bound shape of architecture within the limits of spaces made for human usability and interaction. *The Handbook of Research on Form and Morphogenesis in Modern Architectural Contexts* provides emerging research on the process of architectural form-finding as an effort to balance perceptive efficiency with functionality. While highlighting topics such as architectural geometry, reverse modeling, and digital fabrication, this book details the geometric process that forms the shape of a building. This publication is a vital resource for scholars, IT professionals, engineers, architects, and business managers seeking current research on the development and creation of architectural design.
