Beyond Individual Differences Beyond Individual Differences:

Complex Problem Solving Beyond the Psychometric Approach Wolfgang Schoppek, Joachim Funke, Magda Osman, Annette Kluge, 2018-09-28 Complex problem solving CPS and related topics such as dynamic decision making DDM and complex dynamic control CDC represent multifaceted psychological phenomena In a broad sense CPS encompasses learning decision making and acting in complex and dynamic situations Moreover solutions to problems that people face in such situations are often generated in teams or groups This adds another layer of complexity to the situation itself because of the emerging issues that arise from the social dynamics of group interactions This framing of CPS means that it is not a single construct that can be measured by using a particular type of CPS task e g minimal complex system tests which is a view taken by the psychometric community The proposed approach taken here is that because CPS is multifaceted multiple approaches need to be taken to fully capture and understand what it is and how the different cognitive processes associated with it complement each other Thus this Research Topic is aimed at showcasing the latest work in the fields of CPS as well as DDM and CDC that takes a holistic approach to investigating and theorizing about these abilities The collection of articles encompasses conceptual approaches as well as experimental and correlational studies involving established or new tools to examine CPS DDM and CDC This work contributes to answering questions about what strategies and what general knowledge can be transferred from one type of complex and dynamic situation to another what learning conditions result in transferable knowledge and skills and how these features can be trained

Beyond the Learning Curve Craig Speelman, Kim Kirsner, 2005-10-13 For years now learning has been at the heart of research within cognitive psychology How do we acquire new knowledge and new skills Are the principles underlying skill acquisition unique to learning or similar to those underlying other behaviours Is the mental system essentially modular or is the mental system a simple product of experience a product that inevitably reflects the shape of the external world with all of its specialisms and similarities This new book takes the view that learning is a major influence on the nature of the processes and representations that fill our minds Throughout the authors review and consider

the areas of skill acquisition and lexical representation to illustrate the effects that practice can have on cognitive processes They also draw parallels between theories in physical and biological domains to propose not only a new theory of mental function but also demonstrate that the mind is essentially subject to the same natural laws as the physical world In so doing Speelman and Kirsner present a new perspective on psychology one that identifies universal principles underlying all behaviours and one which contrasts markedly from our current focus on highly specific behaviours Accessibly written *Beyond the Learning Curve* is a thought provoking and challenging new text for students and researchers in the cognitive sciences
