Part One includes quickstart guides or summary sheets for beginning students who want to jump into using QTR before understanding all of its functional components. Part Two addresses dimroom, darkroom, and printmaking practices, walking the reader through brief workflows from negative to print for lithium palladium, gum bichromate, cyanotype, salted paper, kallitype, silver gelatin, and polymer photogravure, with a sample profile for each. It also includes an introduction to a new software iteration of QTR, QuickCurve DN QCDN. Part Three is devoted to contemporary practitioners who explain how they use QTR in their creative practice. The book includes a list of supplies and software needed, a summary QTR glossary with a simple explanation of how each function works, a sample walk-through to create a QTR profile from start to finish, how to linearize profiles with simple to more exacting tools, a visual guide to modifying functions, quickstart guides for many of the workflows, instructions for crafting monochrome, duotone, tricolor, and quadcolor negatives, instructions for using QTR to print silver gelatin in the darkroom, instructions for using QTR to print alternative processes in the dimroom, instructions for using QTR to print polymer photogravure in the printmaking room, an introductory chapter to QuickCurve DN software, troubleshooting common QTR problems, generic starter profiles for processes discussed, contemporary artists' work and QTR process, learning how to craft expert digital negatives can be a bit overwhelming at the outset.
