

Correct seat belt routing

- The shoulder part of the seat belt must always lie on the centre of the shoulder, never across the neck, over or under the arm or behind the back.
- The lap part of the seat belt must always lie across the pelvis, never across the stomach.
- The seat belt must always lie flat and snugly on the body. Tighten the seat belt if necessary.

For pregnant women the seat belt must be positioned evenly over the chest and as low as possible over the pelvis. It must also lie flat so that no pressure is exerted on the abdomen - this applies in every stage of pregnancy → Fig. 12.

Correct seat belt routing according to height

The following equipment can be used to adjust the seat belt routing:

- Seat belt height adjuster for the front seats → page 16.
- Height-adjustable front seats → page 7.

WARNING

Incorrect seat belt routing can cause severe injuries in the event of an accident or a sudden braking or driving manoeuvre.

- The seat belts only offer best protection when the backrests are in an upright position and the seat belts have been fastened properly.

- The seat belt itself or a loose seat belt can cause serious injuries if the seat belt shifts from harder body parts in the direction of softer body parts (e.g. stomach).

- The shoulder part of the seat belt must lie on the centre of the shoulder and never under the arm or across the neck.

- The seat belt must lie flat and snugly on the chest.

- The lap part of the seat belt must lie across the pelvis and never across the stomach. The seat belt must lie flat and snugly on the pelvis. Tighten the seat belt if necessary.

- For pregnant women, the lap part of the seat belt must be as low as possible over the pelvis and lie flat around the bulge of the belly.

- Do not twist the belt webbing while the seat belt is being worn.

- Never hold the seat belt away from the body by hand.

- The belt webbing should not lie over hard or fragile objects, such as glasses, pens or keys.
- Never use seat belt clips, retaining rings or similar items to alter the seat belt routing.

- If a person's physical build prevents them from routing the seat belt properly, contact a qualified workshop to find out about any special modifications so that the seat belts and airbags can provide the optimum level of protection. Volkswagen recommends using a Volkswagen dealership for this purpose.

Seat belt height adjuster

Fig. 13 Next to the front seats: belt height adjuster.

- ❏ Please refer to ▲ at the start of the chapter on page 10.

The seat belt height adjusters for the front seats can be used to adjust the position of the seat belt on the shoulder so that it can be fastened properly.

- Push the shoulder belt guide together in the direction of the arrows and hold → Fig. 13.
- Push the shoulder belt guide up or down so that the seat belt lies over the middle of the shoulder → page 15, Seat belt routing.
- Let go of the shoulder belt guide.
- Pull sharply on the seat belt to check whether the shoulder belt guide is engaged securely.

WARNING

Never adjust the seat belt height when the vehicle is in motion.

Belt retractor, belt tensioner, belt tension limiter

- ❏ Please refer to ▲ at the start of the chapter on page 10.

The seat belts in the vehicle are part of the vehicle safety concept → page 19 and include the following important functions:

Automatic belt retractor

Every seat belt is equipped with an automatic belt retractor on the shoulder part of the belt. Full freedom of movement is made possible when the shoulder belt is pulled slowly or when the vehicle is travelling at normal speeds. However, if the belt is pulled out quickly or during sudden braking, during travel in mountains or bends and during acceleration, the automatic belt retractor is locked.

Fastened seat belts on the front seats may be tensioned automatically by the proactive occupant protection system in critical situations, for example during an emergency stop or when overtaking or understeering. Both seat belts are once again released if the accident is prevented or the critical situation is over. The proactive occupant protection system is ready to be triggered again → page 18, Proactive occupant protection system.

Belt tensioners

The seat belts for the front seat vehicle occupants, and in some cases those on the outer rear seats, are equipped with belt tensioners.

The belt tensioners are activated by sensors detecting severe frontal, side and rear collisions. They tighten the seat belts against the direction in which they are pulled. Any slack in the seat belt is retracted, which can reduce the passenger's movement forwards or in the direction of the impact. The belt tensioner works together with the airbag system. If the side airbags are not activated, the belt tensioner will not be activated if the vehicle rolls over.

A fire risk may be produced when the airbags are triggered. This is quite normal and does not mean that there is a fire in the vehicle.

Reversible belt tensioning (proactive occupant protection system)

Reversible belt tensioning may trigger temporarily in certain driving situations, for example during a sudden braking manoeuvre or when overtaking and understeering → page 18, Proactive occupant protection system.

Belt tension limiter

The belt tension limiter reduces the pressure exerted by the seat belt on the body during an accident.

- All safety requirements must be observed when the vehicle or components of the system are scrapped. Qualified workshops are familiar with these requirements → page 17.

Service and disposal of belt tensioners

- ❏ Please refer to ▲ at the start of the chapter on page 10.

Seat belts may become damaged during any work on the belt tensioners or while removing or refitting any vehicle parts in conjunction with any other repair work. This damage will not always be noticeable. The consequence may be that the belt tensioners could function incorrectly, or not function at all, in the event of an accident.

Repairs must be obtained to ensure that the effectiveness of the belt tensioner is not reduced and that removed parts do not cause any injuries or environmental pollution. Qualified workshops are familiar with these requirements.

WARNING

The risk of severe or fatal injuries may be increased if the seat belts, automatic belt tensioners and belt tensioners are not used correctly, or if they are repaired by a non-professional. As a result, the belt tensioner may not be triggered when they should, or they may be triggered unexpectedly.
