Advances in Marine and Freshwater Monitoring to support Aquatic Ecosystem Conservation and Restoration Elisabetta Manea, Caterina Bergami, Robert Ptacnik, 2023-11-13 Conserving and restoring freshwater and marine ecosystems are priorities addressed by several European and global conservation initiatives Many management and conservation initiatives have been put in place to support the achievement of declared national and global conservation and sustainability goals Nonetheless the extent to which all these initiatives can provide lasting positive effects on conservation and restoration targets is often impaired limited by the lack of robust baseline data and systematic monitoring which in turn are constrained by the limited number of long term monitoring programs and limited dedicated funding This collection underlines the importance of monitoring in

times of global change and shifting baselines and the urgency of boosting conservation strategies to ensure progression towards meeting global conservation objectives Emphasis is given also to the socio ecological contexts and dimensions of conservation efforts and the potential of societal engagement in monitoring practices a key enabling factor to turn conservation initiatives into practical actions and ecosystem protection
