Stal, Mariana Silvia Cretoiu, 2022-02-28 This updated and expanded second edition reviews numerous aspects of the marine microbiome and its possible industrial applications The marine microbiome is the total of microorganisms and viruses in the ocean and seas and in any connected environment including the seafloor and marine animals and plants In the first part of the book diversity origin and evolution of the marine microorganisms and viruses are discussed The microbes presented originate from all three domains of life Bacteria Archaea and Eukarya The second part sheds some light on the different communities it describes marine habitats and how their

inhabitants control biogeochemical cycles The third part finally examines the microbial ocean as a global system and evaluates methods of utilizing marine microbial resources Adopting a translational approach the book connects academic research with industrial applications making it a fascinating read and valuable resource for microbiologists from both domains

Marine Omics in a Changing Ocean: Modelling Molecular Pathways and Networks to Understand Species Acclimation and Adaptation Carolina Madeira, Piero Calosi, Diana Sofia Madeira, 2024-07-08 Global climate change is a major threat to marine biodiversity worldwide Average changes in ocean temperature pH and oxygenation are re shaping marine communities with significant impacts on the critical services that marine ecosystems provide to mankind As global climate change continues the frequency duration and intensity of extreme weather events are also predicted to increase with fast and far reaching consequences on marine species including mass mortality and disruption of ecological processes As a result millions of ocean dependent livelihoods and jobs are also at risk with consequent economic impacts Given the current climate and biodiversity crisis the Intergovernmental Science Policy Platform on Biodiversity and Ecosystem Services has emphasized the relevance of 1 increasing knowledge and protection of biodiversity and 2 assessing species climate driven extinction risks To achieve these goals we need to understand organism environment ecology evolution interactions at various levels of the biological hierarchy from molecules to ecosystems However we are still lacking a comprehensive understanding of the molecular mechanisms shaping phenotypic landscapes in the natural environment and under different global change scenarios To address such challenges a new strategic program was also launched by the European Molecular Biology Laboratory EMBL Molecules to Ecosystems to study life in context and provide new research avenues in molecular life sciences In this context the emerging disciplines of Marine Omics and Marine Systems Biology will be key to supporting innovative solutions in marine ecosystem conservation and blue bioeconomy for example uncover molecular traits underlying sensitivity tolerance to environmental change supporting assisted evolution approaches molecular targets that can be used for diagnostics monitoring and development of biotechnological applications

Marine Ecosystem Assessment for the Southern Ocean: Meeting the Challenge for Conserving Earth Ecosystems in the Long Term Monica M. C.

Muelbert, 2024-12-24 National and international agencies need assessments of change in ecosystems and their drivers in order to sustain natural systems to maintain the delivery of services and to meet the challenge for conserving Earth ecosystems in the long term In marine systems change may arise directly from human activities e g fisheries indirectly from local or global activities cascading effects through food webs from fisheries or changing environments from climate change and or ocean acidification or from naturally varying processes A particular challenge for managers is to identify how dangerous future climate change will be for ecosystems and their services and whether mitigation or adaptation may be needed in advance in order to achieve the conservation requirements For regions of international attention particularly those

that have the attention of many management or policy oriented bodies a standardized process is needed to harmonize the scientific information on the status and trends in ecosystems used by the different bodies That process also needs to ensure the information is available in a timely manner For example assessments of change in habitats species and or food webs in the Southern Ocean are currently compiled separately for at least ten different international organizations or processes A Marine Ecosystem Assessment for the Southern Ocean MEASO aims to harmonize that information for policy makers This assessment began with an international conference in April 2018 <http://www.measo2018.aq> where it was agreed to undertake the first MEASO over 2018-2019 with the view to provide the outcomes to relevant bodies such as the Scientific Committee for the Conservation of Antarctic Marine Living Resources soon after

Strengthening International Fisheries Law in an Era of Changing Oceans Richard Caddell, Erik J Molenaar, 2019-04-04 This collection addresses the central question of how the current international framework for the regulation of fisheries may be strengthened in order to meet the challenges posed by changing fisheries and ocean conditions in particular climate change International fisheries law has developed significantly since the 1990s through the adoption and establishment of international instruments and bodies at the global and regional levels Global fish stocks nevertheless remain in a troubling state and fisheries management authorities face a wide array of internal and external challenges including operational constraints providing effective management advice in the face of scientific uncertainty and non compliance by States with their international obligations This book examines these challenges and identifies options and pathways to strengthen international fisheries law While it has a primarily legal focus it also features significant contributions from specialists drawn from other disciplines notably fisheries science economics policy and international relations in order to provide a fuller context to the legal policy and management issues raised Rigorous and comprehensive in scope this will be essential reading for lawyers and non lawyers interested in international fisheries regulation in the context of profoundly changing ocean conditions

Identifying and Comparing Important Areas for Marine Sustainable Use and Conservation Sofie Van Parijs, Joseph Appiott, Leslie New, Piers Dunstan, Giuseppe Notarbartolo di Sciara, 2024-05-24 The ocean is under increasing threat from the expansion of human activities The combined impacts of these threats as well as the potential impacts of climate change and ocean acidification have placed thousands of species at risk of extinction and have impaired the structure function productivity and resilience of marine ecosystems Currently some parts of the world's oceans are significantly impacted yet are without any form of effective management Only a small proportion of the oceans are within protected area systems Globally measures are being taken to increase protection and sustainable management but application is uncoordinated and not always effective In order to support effective policy action by countries and competent international and regional organizations it is critical to build a sound understanding of the most ecologically and biologically important ocean areas that support healthy marine ecosystems so that the necessary steps to ensure the long term function and resilience of these systems can be taken

Climate Change Impacts on Fisheries

and Aquaculture Bruce F. Phillips, Mónica Pérez-Ramírez, 2017-09-18 The first comprehensive review of the current and future effects of climate change on the world's fisheries and aquaculture operations The first book of its kind *Climate Change Impacts on Fisheries and Aquaculture* explores the impacts of climate change on global fisheries resources and on marine aquaculture It also offers expert suggestions on possible adaptations to reduce those impacts The world's climate is changing more rapidly than scientists had envisioned just a few years ago and the potential impact of climate change on world food production is quite alarming Nowhere is the sense of alarm more keenly felt than among those who study the warming of the world's oceans Evidence of the dire effects of climate change on fisheries and fish farming has now mounted to such an extent that the need for a book such as this has become urgent A landmark publication devoted exclusively to how climate change is affecting and is likely to affect commercially vital fisheries and aquaculture operations globally *Climate Change Impacts on Fisheries and Aquaculture* provides scientists and fishery managers with a summary of and reference point for information on the subject which has been gathered thus far Covers an array of critical topics and assesses reviews of climate change impacts on fisheries and aquaculture from many countries including Japan Mexico South Africa Australia Chile US UK New Zealand Pacific Islands India and others Features chapters on the effects of climate change on pelagic species cod lobsters plankton macroalgae seagrasses and coral reefs Reviews the spread of diseases economic and social impacts marine aquaculture and adaptation in aquaculture under climate change Includes special reports on the Antarctic Ocean the Caribbean Sea the Arctic Ocean and the Mediterranean Sea Extensive references throughout the book make this volume both a comprehensive text for general study and a reference guide to further research for fisheries scientists fisheries managers aquaculture personnel climate change specialists aquatic invertebrate and vertebrate biologists physiologists marine biologists economists environmentalist biologists and planners *Marine Mammals: the Evolving Human Factor* Giuseppe Notarbartolo di Sciara, Bernd Würsig, 2022-06-08 The seventh volume in the series *Ethology and Behavioral Ecology of Marine Mammals* describes aspects of the often complex relationship between humans and marine mammals From a primeval condition of occasional predators during the last century humans have become a major factor negatively affecting the status of most marine mammals through over hunting habitat encroachment and environmental degradation This has led to the extirpation of many marine mammal populations and even to the extinction of species However in parallel to this destructive drive since antiquity humanity has been influenced by a strong fascination for marine mammals which contributes today to an increased human appreciation of the natural world admixed with widespread concern for its degrading condition The special status occupied by marine mammals in human imagination and affection stands in stark contrast with the current predicament of many populations still threatened by the doings of *Homo sapiens* a condition emblematic of the relationship of humanity with nature and key to understanding where humanity is heading *Marine Pollution - Emerging Issues and Challenges* Elisabeth Marijke Anne Strain, Laura Airolidi, Kenneth Mei Yee
