Applications of Statistics and Probability in Civil Engineering Michael Faber,Jochen Koehler,Kazuyoshi Nishijima,2011-07-15 Under the pressure of harsh environmental conditions and natural hazards large parts of the world population are struggling to maintain their livelihoods Population growth increasing land utilization and shrinking natural resources have led to an increasing demand of improved efficiency of existing technologies and the development of new ones A Transcatheter Valve Repair Ziyad M. Hijazi,Carlos E. Ruiz,Philipp Bonhoeffer,Ted Feldman,2006-01-17 Transcatheter Valve Repair discusses all aspects related to percutaneous and established valve repair methods The book is divided into few major sections covering all four valves and other topics Each section contains several chapters discussing everything related to that valve Beginning with the pulmonary valve since it was the first valve to be tackled in the catheterization laboratory

and then moving to the aortic then the mitral and then finally end with the tricuspid valve 1.5M US citizens alone have some degree of aortic valve stenosis with half 750K requiring aortic valve replacement Aortic valve replacement on the whole is performed by surgeons requiring bypass machines and technicians as well as the usual operating team The operation is expensive and occupies a considerable amount of operating room time Mostly the aortic valve is calcified and the usual option available to patients is valve replacement with a variety of choices ranging from porcine valves to synthetic for which there are many manufacturers It should be noted that the aortic valve is the most problematic of valves Percutaneous procedures are the answer The bottom line is that given the growing elderly population many more patients will require valve repair thus increasing health care costs with not only surgical operations but also hospitalisation Percutaneous valve repair whilst requiring a cath lab team does not involve bypass machines nor extended hospitalisation Like percutaneous transluminal coronary artery interventions PTCA has replaced coronary artery bypass grafts once the golden standard and now stenting having replaced PTCA and its balloons We now see drug eluting stents replacing ordinary stents though at a much higher cost There will be a huge movement toward percutaneous valve repair which should presumably cut costs but also morbidity and mortality

Fowler, Jean-Louis Granju, 2011-03-16 Among different approaches that can be considered for concrete rehabilitation bonded overlays are often the most economical alternative The primary purpose of overlays is to extend the life of the candidate structures either by restoring the quality and integrity of the surface and or the re-establishing or improving the load carrying capacity Nevertheless the durability of bonded overlay systems still draws concerns in the technical community because of bond sustainability problems encountered in a number of cases At this time there is still no accepted design approach or methodology that can warrant the practitioner a successful outcome of the repair This State of Art report summarizes the findings with respect to all aspects involved in the overlaying process
