*Nature's Building Blocks* John Emsley, 2001 Everything we see around us is made of the chemical elements they are Nature's building blocks Our own bodies contain about 30 of them some in abundance some in trace amounts but nevertheless vital to our health and some that are positively harmful The Earth consists of around 90 elements and again some are abundant such as the silicon and oxygen of rocks and soils while some are so rare that they make gold seem cheap yet even these can be part of our everyday life The total number of known elements is now 115 at the last count although most of the 25 new elements that have been synthesized in the past half century have existed for less than a day Some however have accumulated until they now threaten the environment *Nature's Building Blocks* explains the what why and wherefore of the chemical elements Arranged alphabetically from Actinium to Zirconium it is a complete guide to all 115 of those that are currently known and especially those which comprise everything we encounter in our everyday life The entry on each element reveals where it came from what role it may have in the human body and the foods that contain it There are also sections on its discovery its part in human health or illness the uses and misuses to which it is put and its environmental role A list of the main scientific data and outline properties are given for every element and the section ends with an Element of Surprise which highlights some unexpected way in which each element impinges on our everyday life

rather to make themselves richer through magic formulas and con games But among these early magicians frauds and con artists were a few far seeing alchemists who through rigorous experimentation transformed mysticism into science By the 18th century the building blocks of nature the elements of which all matter is composed were on the verge of being discovered Initially it was not easy to determine whether a substance really was an element Was water just water plain and simple Or could it be the sum of other unknown and maybe unknowable parts And if water was made up of other substances how could it be broken down into discrete fundamental and measurable components Scientific historians generally credit the great 18th century French chemist Antoine Lavoisier with addressing these fundamental questions and ultimately modernizing the field of chemistry Through his meticulous and precise work this chaotic new field of scientific inquiry was given order Exacting by nature Lavoisier painstakingly set about performing experiments that would provide lasting and verifiable proofs of various chemical theories Unfortunately the outspoken Lavoisier eventually lost his head in the Terror but others would follow his lead carefully examining measuring and recording their findings As the field slowly progressed another pioneer was to emerge almost 100 years later Dimitri Mendeleev an eccentric genius who cut his flowing hair and beard but once a year sought to answer the most pressing questions that remained to chemists Why did some elements have properties that resembled those of others Were there certain natural groups of elements And if so how many and what elements fit into them It was Mendeleev who finally addressed all these issues when he constructed the first Periodic Table in the late 1800s But between and after Lavoisier and Mendeleev were a host of other colorful brilliant scientists who made their mark on the field of chemistry Depicting the lively careers of these scientists and their contributions while carefully deconstructing the history and the science author Richard Morris skillfully brings it all to life Hailed by Kirkus Reviews as a clear and lively writer with a penchant for down to earth examples Morris's gift for explanation and pure entertainment is abundantly obvious Taking a cue from the great chemists themselves Morris has brewed up a potent combination of the alluringly obscure and the historically momentous spiked with just the right dose of quirky and ribald detail to deliver a magical brew of history science and personalities
