Biological Research for Energy and Medical Applications at the Department of Energy Office of Science United States. Congress. House. Committee on Science and Technology (2007). Subcommittee on Energy and Environment, 2009 *Improving Diagnosis in Health Care* National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Health Care Services, Committee on Diagnostic Error in Health Care, 2016-01-29 Getting the right diagnosis is a key aspect of health care it provides an

explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to *Improving Diagnosis in Health Care*, diagnostic errors, inaccurate or delayed diagnoses, persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible but also represents a moral, professional, and public health imperative. *Improving Diagnosis in Health Care* is a continuation of the landmark Institute of Medicine reports *To Err Is Human* (2000) and *Crossing the Quality Chasm* (2001), which find that diagnosis and, in particular, the occurrence of diagnostic errors, has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of *Improving Diagnosis in Health Care* contribute to the growing momentum for change in this crucial area of health care quality and safety.

Assuring a Future U.S.-Based Nuclear and Radiochemistry Expertise National Research Council, Policy and Global Affairs, Board on Higher Education and Workforce, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Board on Chemical Sciences and Technology, Committee on Assuring a Future U.S.-Based Nuclear Chemistry Expertise, 2012-09-16. The growing use of nuclear medicine, the potential expansion of nuclear power generation, and the urgent needs to protect the nation against external nuclear threats to maintain our nuclear weapons stockpile and to manage the nuclear wastes generated in past decades require a substantial, highly trained and exceptionally talented workforce. *Assuring a Future U.S.-Based Nuclear and Radiochemistry Expertise* examines supply and demand for expertise in nuclear chemistry, nuclear science, and radiochemistry in the United States and presents possible approaches for ensuring adequate availability of these skills, including necessary science and technology training platforms. Considering a range of reasonable scenarios looking to the future, none of these areas is likely to experience a decrease in demand for expertise. However, many in the current workforce are approaching retirement age, and the number of students opting for careers in nuclear and radiochemistry has decreased dramatically over the past few decades. In order to avoid a gap in these critical areas, increases in student interest in these careers, in the research and educational capacity of universities and colleges, and in sector-specific on-the-job training will be needed. Concise recommendations are given for actions to avoid a shortage of nuclear chemistry, nuclear scientists, and radiochemists in the future.
