**Advanced Machining Processes** Hassan Abdel-Gawad El-Hofy, 2005-03-22 Today's stringent design requirements and difficult to machine materials such as tough super alloys, ceramics and composites have made traditional machining processes costly and obsolete. As a result, manufacturers and machine design engineers are turning to advanced machining processes. These machining processes utilize electrical, chemical, and optimal sources of energy to bind, form, and cut materials. El-Hofy rigorously explains how each of these advanced machining processes work, their machining system components, process variables, and industrial applications, making this book the perfect guide for anyone designing, researching, or converting to a more advanced machining process.

**Fundamentals of Machining Processes** Hassan Abdel-Gawad El-Hofy, 2013-08-06 Completely revised and updated, this second edition of *Fundamentals of Machining Processes: Conventional and Nonconventional Processes* covers the fundamentals of machining by cutting, abrasion, erosion, and combined processes. The new edition has been expanded with two additional chapters covering the concept of machinability and the roadmap for selecting machining processes that meet required design specifications. See What's New in the Second Edition: Explanation of the definition of the relative machinability index and how the machinability is judged; Important factors affecting the machinability ratings; Machinability ratings of common engineering materials by conventional and nonconventional methods; Factors to be considered when selecting a machining process that meets the design specifications, including part features, materials, product accuracy, surface texture, surface integrity, cost, environmental impacts, and the process and the machine selected capabilities; Introduction to new Magnetic Field Assisted Finishing Processes. Written by an expert with 37 years of experience in research and teaching machining and related topics, this covers machining processes that range from basic conventional metal cutting, abrasive machining, to the most advanced nonconventional and micromachining processes. The author presents the principles and theories of material removal and applications for conventional and nonconventional machining processes, discusses the role of machining variables in the technological characteristics of each process, and provides treatment of current technologies in high speed machining and micromachining. The treatment of the different subjects has been developed from basic principles and does not require the knowledge of advanced mathematics as a prerequisite. A fundamental textbook for undergraduate students, this book contains machining data, solved examples, and review questions which are useful for students and manufacturing engineers.

*Hybrid Machining Processes* Kapil Gupta, Neelesh K. Jain, R. F. Laubscher, 2015-11-07 This book describes various hybrid machining and finishing processes. It gives a critical review of the past work based on them, as well as the current trends and research directions. For each hybrid machining process presented, the authors list the method of material removal, machining system, process variables, and applications. This book provides a deep understanding of the need, application, and mechanism of hybrid machining processes.
