Opportunities in Protection Materials Science and Technology for Future Army Applications National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, National Materials Advisory Board, Committee on Opportunities in Protection Materials Science and Technology for Future Army Applications, 2011-07-27. Armor plays a significant role in the protection of warriors. During the course of history, the introduction of new materials and improvements in the materials already used to construct armor has led to better protection and a reduction in the weight of the armor. But even with such advances in materials, the weight of the armor required to manage threats of ever-increasing destructive capability presents a huge challenge. *Opportunities in Protection Materials Science and Technology for Future Army Applications* explores the current theoretical and experimental understanding of the key issues surrounding protection materials, identifies the major challenges and technical gaps for developing the future generation of lightweight protection materials, and recommends a path forward for their development. It examines multiscale shockwave energy transfer mechanisms and experimental approaches for their characterization over short timescales as well as multiscale modeling techniques to predict mechanisms for dissipating energy. The report also considers exemplary threats and design philosophy for the three key applications of armor systems: 1) personnel protection including body armor and helmets; 2) vehicle armor; and 3) transparent armor. *Opportunities in Protection Materials Science and Technology for Future Army Applications* recommends that the Department of Defense (DoD) establish

a defense initiative for protection materials by design PMD with associated funding lines for basic and applied research The PMD initiative should include a combination of computational experimental and materials testing characterization and processing research conducted by government industry and academia Mechanical Properties and Performance of Engineering Ceramics II, Volume 27, Issue 2 Rajan Tandon, 2009-09-29 This volume contains over 70 papers on advanced research and development of processing mechanical properties and mechanics of ceramics and composites from the proceedings of the 30th International Conference on Advanced Ceramics and Composites January 22-27 2006 in Cocoa Beach Florida The conference was organized and sponsored by The American Ceramic Society and The American Ceramic Society's Engineering Ceramics Division in conjunction with the Nuclear and Environmental Technology Division It covers underlying fundamental links between microstructure and properties and the ability to achieve desired multifunctional properties through innovative processing techniques
