Wilkinson,Theo Moons,2012-12-06 Since 1994 the European Commission has undertaken various actions to expand the use of Earth observation EO from space in the Union and to stimulate value added services based on the use of Earth observation satellite data By supporting research and technological development activities in this area DG XII responded to the need to increase the cost effectiveness of space derived environmental information At the same time it has contributed to a better exploitation of this unique technology which is a key source of data for environmental monitoring from local to global scale MAVIRIC is part of the investment made in the context of the Environment and Climate Programme 1994 1998 to strengthen applied techniques based on a better understanding of the link between the remote sensing signal and the underlying bio geo

physical processes Translation of this scientific know how into practical algorithms or methods is a priority in order to convert more quickly effectively and accurately space signals into geographical information Now the availability of high spatial resolution satellite data is rapidly evolving and the fusion of data from different sensors including radar sensors is progressing well the question arises whether existing machine vision approaches could be advantageously used by the remote sensing community Automatic feature object extraction from remotely sensed images looks very attractive in terms of processing time standardisation and implementation of operational processing chains but it remains highly complex when applied to natural scenes , Department of the Interior and Related Agencies Appropriations for 1993 United States.
