Advances In Applied Microbiology Volume 75:

Advances in Applied Microbiology Allen I. Laskin, Geoffrey M. Gadd, Sima Sariaslani, 2011-08-17 Published since 1959
Advances in Applied Microbiology continues to be one of the most widely read and authoritative review sources in microbiology. The series contains comprehensive reviews of the most current research in applied microbiology. Recent areas covered include bacterial diversity in the human gut, protozoan grazing of freshwater biofilms, metals in yeast fermentation processes and the interpretation of host pathogen dialogue through microarrays. Eclectic volumes are supplemented by thematic volumes on various topics including Archaea and sick building syndrome. Impact factor for 2009: 1.860. Contributions from leading authorities. Informs and updates on all the latest developments in the field. Reference and guide for scientists and specialists involved in advancements in applied microbiology. Advanced Topics in Biomineralization Jong Seto, 2012-02-17. Advanced Topics in Biomineralization is a compendium of current topics focusing on processes of formation, organization as well as mineralization of novel structural materials. From enchondral ossification to the application of biomineralized cement, the subject of biomineralization encompasses a range of diverse disciplines including molecular biology, supramolecular chemistry, materials science and engineering. A common theme in all these areas of research in biomineralization is the ability to utilize strategies from Nature to create functional materials. By understanding Nature's tools to make strong and tough materials, similar properties can be endowed into man-made materials in the near future.

Microalgae Biotechnology for Development of Biofuel and Wastewater Treatment Md. Asraful Alam, Zhongming Wang, 2019-04-30. This book addresses microalgae, which represent a very promising biomass resource for wastewater treatment and producing biofuels. Accordingly, microalgae are also an expanding sector in biofuels and wastewater treatment, as can be seen in several high-profile start-ups from around the globe, including Solix Biofuels, Craig Venter's Synthetic Genomics, PetroSun, Chevron Corporation, ENN Group, etc. In addition, a number of recent studies and patent applications have confirmed the value of modern microalgae for biofuels production and wastewater treatment systems. However, substantial inconsistencies have been observed in terms of system boundaries, scope, the cultivation of microalgae, and oil extraction systems, production costs, and economic viability, cost-lowering components, etc. Moreover, the downstream technologies and core principles involved in liquid fuel extraction from microalgae cells are still in their early stages and not always adequate for industrial production. Accordingly, multilateral co-operation between universities, research institutes, governments, stakeholders, and researchers is called for in order to make microalgae biofuels economical. Responding to this challenge, the book begins with a general introduction to microalgae and the algae industry and subsequently discusses all major aspects of microalgal biotechnology, from strain isolation and robust strain development to biofuel development, refinement, and wastewater treatment. **Microbiology of wetlands** Paul Bodelier, Svetlana N. Dedysh, 2013-07-08. Water-saturated soil and sediment ecosystems, i.e. wetlands, are ecologically as well as economically important systems due to their high productivity.

their nutrient re cycling capacities and their prominent contribution to global greenhouse gas emissions Being on the transition between terrestrial and aquatic ecosystems wetlands are buffers for terrestrial run off thereby preventing eutrophication of inland as well as coastal waters The close proximity of oxic anoxic conditions often created by wetland plant roots facilitates the simultaneous activity of aerobic as well as anaerobic microbial communities Input of nutrients and fast recycling due to active aerobes and anaerobes makes these systems highly productive and therefore attractive for humans as well as many other organisms Wetlands globally are under high pressure due to anthropogenic activities as well as climate change Changes of land use as well as altered hydrology due to climate change will lead to disturbance and loss of these habitats However the diversity and functioning of microbial communities in wetlands systems is highly underexplored in comparison to soils and aquatic ecosystems Given the importance of wetlands and their immediate threats combined with the lack of knowledge on the microbiology of these systems is the basis for this special issue focusing on the current microbiological knowledge and gaps therein to be assessed in future wetland research Papers research papers reviews perspectives opinion papers are welcomed that focus on all aspects that regulate the functioning and community composition of microbes i e bacteria archaea protozoa fungi in wetland ecosystems peat coastal as well as freshwater marshes flood plains rice paddies littoral zones of lakes etc from all geographic regions Welcomed topics are physiology ecology functioning biodiversity biogeography of microbes involved in nutrient cycling C N P Fe Mn green house gas emissions as well as plant microbe interactions These studies can be multidisciplinary and cover topics from the molecular to the community level

Bajpai, 2005-08-05 Pulp and paper production has increased globally and will continue to increase in the near future. Approximately 155 millions tons of wood pulp is produced worldwide and about 260 millions is projected for 2010. To cope with the increasing demand an increase in production and improved environmental performance is needed as the industry is under constant pressure to reduce environmental emissions to air and water. This book gives updated information on environmentally benign approaches for pulp bleaching which can help solve the problems associated with conventional bleaching technologies. Main focus is on the environmentally friendly technologies that can help solve some of the problems associated with conventional bleaching technologies. Information given is up to date authoritative and cites the experiences of many mills and pertinent research which is of interest to those working in the industry or intending to do so. Covers in great depth all the aspects of various bleaching processes including environmental issues. **Chemical Biology** Deniz Ekin, 2012-02-17 Chemical biology utilizes chemical principles to modulate systems to either investigate the underlying biology or create new function.
