Japan,1997 **Information Technologies for Remote Monitoring of the Environment** Vladimir Krapivin,Anatolij M. Shutko,2012-06-12 The key novelty of this book is first of all in the successful attempt to conduct jointly modeling of environment in terms of physical environment related parameters and measuring similar parameters by means of multispectral remote sensing primarily by means of passive microwave remote sensing technology Another new step is in the development and utilization of a multilevel approach which includes remote sensing of the land and water parameters like soil moisture depth to water table biomass of vegetation temperature and salinity of water in situ measurements of similar parameters and incorporation of GIS and data sets into the models of typical environments The part of book which contains remote sensing is focused on multipurpose observations from aircraft obtained in many soil climatic zones in different countries and is reach of the examples of practical application Applied mathematicians geophysicists hydrologists socio economists statesmen and other researchers of environmental changes will find a wealth of information and ideas in this book New Ecoinformatics Tools in Environmental Science Vladimir F. Krapivin,Costas A. Varotsos,Vladimir Yu. Soldatov,2015-01-24 This book provides new insights on the study of global environmental changes using the ecoinformatics tools and the adaptive evolutionary technology of geoinformation monitoring The main advantage of this book is that it gathers and presents extensive interdisciplinary expertise in the parameterization of global biogeochemical cycles and other environmental processes in the context of globalization and sustainable development In this regard the crucial global problems concerning the dynamics of the nature society system are considered and the key problems of ensuring the system s sustainable development are studied A new approach to the numerical modeling of the nature society system is proposed and results are provided on modeling the dynamics of the system s characteristics with regard to scenarios of anthropogenic impacts on biogeochemical cycles land ecosystems and oceans The main purpose of this book is to develop a universal guide to information modeling technologies for assessing the function of environmental subsystems under various climatic and anthropogenic conditions
