Identity: A Very Short Introduction Florian Coulmas, 2019-02-21

Identity has become one of the most widely used terms today appearing in many different contexts. Anything and everything has an identity and identity crises have become almost equally pervasive. Yet identity is extremely versatile meaning different things to different people and in different scientific disciplines. To many its meaning seems self evident since its various uses share common features so often the term is used without a definition of what exactly is meant by it. This provokes the core question: What exactly is identity? In this Very Short Introduction Florian Coulmas provides a survey of the many faces of the concept of identity and discusses its significance and varied meanings in the fields of philosophy, sociology and psychology as well as politics and law. Tracing our concern with identity to its deep roots in Europe's intellectual history, individualism and the felt need to draw borderlines, Coulmas identifies the most important features used to mark off individual and collective identities and demonstrates why they are deemed important. He concludes with a glimpse at the many ways in which literature has engaged with problems of identity throughout history.

Combinatorics: A Very Short Introduction

Robin Wilson, 2016-04-28

How many possible sudoku puzzles are there? In the lottery, what is the chance that two winning balls have consecutive numbers? Who invented Pascal's triangle? It was not Pascal. Combinatorics, the branch of mathematics concerned with selecting, arranging and listing or counting collections of objects, works to answer all these questions. Dating back some 3000 years and initially consisting mainly of the study of permutations and combinations, its scope has broadened to include topics such as graph theory, partitions of numbers, block designs, design of codes and latin squares. In this Very Short Introduction Robin Wilson gives an overview of the field and its applications in mathematics and computer theory, considering problems from the shortest routes covering certain stops to the minimum number of colours needed to colour a map with different colours for neighbouring countries.
