An Age of Accountability John L. Rury, 2023-10-13 An Age of Accountability highlights the role of test based accountability as a policy framework in American education from 1970 to 2020 For more than half a century the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment The theory of change embedded in almost all test based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps which repeatedly failed to materialize But even after very clear disappointments no other policy framework has emerged to challenge its hegemony The American public today has little confidence in institutions to improve the quality of goods and services they provide especially in the public sector As a consequence many Americans continue to believe that accountability remains a vital necessity even if educators and policy scholars disagree

Neurocognitive Foundations of Mind Gualtiero Piccinini, 2025-09-18 This volume provides a cohesive and comprehensive case that cognitive neuroscience is maturing into an integrated interdisciplinary science that is transforming our understanding of the mind The rise of cognitive neuroscience has prompted a rethinking of levels computation representation psychological explanation and the relation between psychology and neuroscience Despite these advances many philosophers and scientists of the mind continue to write as though cognitive neuroscience didn't exist and psychology remains autonomous from neuroscience or perhaps they maintain that cognitive neuroscience has not deepened our understanding of the mind The chapters in this volume showcase important ways in which cognitive neuroscience makes a profound difference to our understanding of the mind The contributors address a wide range of topics including explanation computation representation inference emotion language intention and thought Together they demonstrate the ways in which cognitive neuroscience supersedes traditional cognitive science and supports a unified integrated multilevel mechanistic neurocomputational account of the mind Neurocognitive Foundations of Mind is essential reading for scholars and advanced students interested in the foundations of the philosophy of mind and the mind sciences

The Rise and Fall of Civic Education Michael Learn, 2024-09-16 Social studies is a field in crisis The crisis stems from failure to establish the very foundation of social studies purpose in public education civic education Social studies advocates have never put forth a coherent method for teaching civic education because policymakers and the public have been unable to agree upon a general definition of civic education This issue has disrupted the field since the early days As educators sought to include civic education within public schools as a dedicated field social studies evolved into a blending of history social sciences and civic education Social studies evolution never resolved the differences between the three with each discipline striving to control the narrative Instead of creating a unified field the disciplines devalued social studies and thus any discipline associated with it The Rise and Fall of Civic Education The Battle for Social Studies in a Shifting Historical Landscape investigates the changing definitions and purposes ascribed to social studies in the United States through time This result is viewed through the rising tensions from culture wars as America's divisive politics fight to control the narrative of the disciplines within social studies
