From Netflix show suggestions to personalized product recommendations on Amazon or the endless stream of curated YouTube videos, these systems power the choices we see every day. Collaborative filtering reigns supreme as the dominant approach behind recommender systems. This book offers a comprehensive exploration of this topic, starting with memory-based techniques. These methods, known for their ease of understanding and implementation, provide a solid foundation for understanding collaborative filtering. As you progress, you'll delve into latent factor models, the abstract and mathematical engines driving modern recommender systems. The journey continues with exploring the concepts of metadata and diversity. You'll discover how metadata, the additional information gathered by the system, can be harnessed to refine recommendations. Additionally, the book delves into techniques for promoting diversity, ensuring a well-balanced selection of recommendations. Finally, the book concludes with a discussion of cutting-edge deep learning models used in recommender systems. This book caters to a dual audience. First, it serves as a primer for practicing IT professionals or data scientists eager to explore the realm of recommender systems. The book assumes a basic understanding of linear algebra and optimization but requires no prior knowledge of machine learning or programming. This makes it an accessible read for those seeking to enter this exciting field. Second, the book can be used as a textbook for a graduate-level course. To facilitate this, the final chapter provides instructors with a potential course plan. **Student's Guide to Calculus by J. Marsden and A. Weinstein** Frederick H. Soon, 1986-05-09 This Student Guide is exceptional, maybe even unique among such guides, in that its author, Fred Soon, was actually a student user of the textbook during one of the years we were writing and debugging the book. He was one of the best students that year, by the way. Because of his background, Fred has taken in the Guide the point

of view of an experienced student tutor helping you to learn calculus ile we do not always think Fred s jokes are as funny as he does we appreciate his enthusiasm and his desire to enter into communication with his readers since we nearly always agree with the mathe matical judgements he has made in explaining the material we believe that this Guide can serve you as a valuable supplement to our text To get maximum benefit from this Guide you should begin by spending a few moments to acquaint yourself with its structure Once you get started in the course take advantage of the many opportunities which the text and Student Guide together provide for learning calculus in the only way that any mathe matical subject can truly be mastered through attempting to solve problems on your own As you read the text try doing each example and exercise your self before reading the solution do the same with the quiz problems provided by Fred
