

We are learning to: Simplifying algebraic fractions.

You may need to **factorise before simplifying** an **algebraic fraction**.

Ex1 Simplify

$$\frac{2x + 8}{4}$$

$$\begin{aligned} \frac{2x + 8}{4} &= \frac{2(x + 4)}{4} \\ &= \frac{x + 4}{2} \end{aligned}$$

Ex2 Simplify

$$\frac{25x^2 + 15}{5}$$

$$\begin{aligned} \frac{25x^2 + 15}{5} &= \frac{5(5x^2 + 3)}{5} \\ &= 5x^2 + 3 \end{aligned}$$

Ex3 Simplify

$$\frac{x + 5}{2x + 10}$$

$$\begin{aligned} \frac{x + 5}{2x + 10} &= \frac{x + 5}{2(x + 5)} \\ &= \frac{1}{2} \end{aligned}$$

- Developing learners will be able simplify algebraic fractions involving linear terms.
- Secure learners will be able to simplify algebraic fractions involving quadratic terms.
- Proficient learners will be able to simplify algebraic fractions involving multiplication and division.

Algebraic Fractions Tes:

Linear Algebraic Groups Armand Borel, 2012-12-06 This book is a revised and enlarged edition of *Linear Algebraic Groups* published by W A Benjamin in 1969 The text of the first edition has been corrected and revised Accordingly this book presents foundational material on algebraic groups Lie algebras transformation spaces and quotient spaces After establishing these basic topics the text then turns to solvable groups general properties of linear algebraic groups and Chevalley's structure theory of reductive groups over algebraically closed groundfields The remainder of the book is devoted to rationality questions over non algebraically closed fields This second edition has been expanded to include material on central isogenies and the structure of the group of rational points of an isotropic reductive group The main prerequisite is some familiarity with algebraic geometry The main notions and results needed are summarized in a chapter with references and brief proofs

Algebra: Polynomials, Galois Theory and Applications Frédéric Butin, 2017-02-15 Suitable for advanced undergraduates and graduate students in mathematics and computer science this precise self contained treatment of Galois theory features detailed proofs and complete solutions to exercises Originally published in French as *Algèbre Polynômes théorie de Galois et applications informatiques* this 2017 Dover Aurora edition marks the volume's first English language publication The three part treatment begins by providing the essential introduction to Galois theory The second part is devoted to the algebraic normal and separable Galois extensions that constitute the center of the theory and examines abelian cyclic cyclotomic and radical extensions This section enables readers to acquire a comprehensive understanding of the Galois group of a polynomial The third part deals with applications of Galois theory including excellent discussions of several important real world applications of these ideas including cryptography and error control coding theory Symbolic computation via the Maple computer algebra system is incorporated throughout the text though other software of symbolic computation could be used as well along with a large number of very interesting exercises with full solutions

Orthonormal Systems and Banach Space Geometry Albrecht Pietsch,Jörg Wenzel,1998-09-10 This book describes the interplay between orthonormal expansions and Banach space geometry Polynomials with Special Regard to Reducibility A.

Schinzel,2000-04-27 This book covers most of the known results on reducibility of polynomials over arbitrary fields algebraically closed fields and finitely generated fields Results valid only over finite fields local fields or the rational field are not covered here but several theorems on reducibility of polynomials over number fields that are either totally real or complex multiplication fields are included Some of these results are based on recent work of E Bombieri and U Zannier presented here by Zannier in an appendix The book also treats other subjects like Ritt s theory of composition of polynomials and properties of the Mahler measure and it concludes with a bibliography of over 300 items This unique work will be a necessary resource for all number theorists and researchers in related fields

Anatolievich Ivanov,Sergei V. Shpectorov,1999 This is the second volume in a two volume set which provides a complete self contained proof of the classification of geometries associated with sporadic simple groups Petersen and tilde geometries The second volume contains a study of the representations of the geometries under consideration in GF 2 vector spaces as well as in some non abelian groups The central part is the classification of the amalgam of maximal parabolics associated with a flag transitive action on a Petersen or tilde geometry The classification is based on the method of group amalgam the most promising tool in modern finite group theory Via their systematic treatment of group amalgams the authors establish a deep and important mathematical result This book will be of great interest to researchers in finite group theory finite geometries and algebraic combinatorics

Quantum Field Theory for Mathematicians Robin Ticciati,1999-06-13 This should be a useful reference for anybody with an interest in quantum theory Lie's Structural Approach to PDE Systems Olle Stormark,2000-06-15 Here is a lucid and comprehensive introduction to the differential geometric study of partial differential equations PDE The first book to present substantial results on local solvability of general and nonlinear PDE systems without using power series techniques it describes a general approach to PDE systems based on ideas developed by Lie Cartan and Vessiot The central theme is the

exploitation of singular vector field systems and their first integrals These considerations naturally lead to local Lie groups Lie pseudogroups and the equivalence problem all of which are covered in detail This book will be a valuable resource for graduate students and researchers in partial differential equations Lie groups and related fields

Algebraic Geometry for Beginners C. Musili,2001-03-15

Nonnegative Matrices and Applications R. B. Bapat,T. E. S.

Raghavan,1997-03-28 This book provides an integrated treatment of the theory of nonnegative matrices matrices with only positive numbers or zero as entries and some related classes of positive matrices concentrating on connections with game theory combinatorics inequalities optimisation and mathematical economics The wide variety of applications which include price fixing scheduling and the fair division problem have been carefully chosen both for their elegant mathematical content and for their accessibility to students with minimal preparation Many results in matrix theory are also presented The treatment is rigorous and almost all results are proved completely These results and applications will be of great interest to researchers in linear programming statistics and operations research The minimal prerequisites also make the book accessible to first year graduate students
