inspiration for many young investigators as well. It contains current approaches and knowledge and we sincerely believe and hope that it will answer your queries regarding new perspectives about neuropathy in general. **Essentials of**

**Regenerative Medicine in Interventional Pain Management** Annu Navani, Sairam Atluri, Mahendra Sanapati, 2024-05-02

Regenerative medicine is an emerging and integral part of interventional pain management and meets definitions of interventional pain management and interventional techniques. Interventional techniques are defined as minimally invasive procedures including percutaneous precision needle placement with placement of drugs in targeted areas or ablation of targeted nerves and some surgical techniques such as laser or endoscopic discectomy, intrathecal infusion pumps and spinal cord stimulators for the diagnosis and management of chronic persistent or intractable pain. On the same token, interventional pain management is defined as the discipline of medicine devoted to the diagnosis and treatment of pain-related disorders principally with the application of interventional techniques in managing subacute chronic persistent and intractable pain independently or in conjunction with other modalities of treatment. This new edition brings a wide array of information for interventional pain physicians and other physicians practicing regenerative medicine with its applications in managing chronic pain and other disorders. The structure of the book begins with an introduction of the subject followed by sections on historical context, pathophysiology, applicability of regenerative medicine with its evidence base, anatomy, technical aspects, complications and precautions for each topic when available and applicable. From across the globe, leading experts in their respective fields contributed chapters on specific topics to present a cogent and integrative understanding of the field of regenerative medicine as applicable for interventional pain physicians. This comprehensive text achieves its goal of providing an evidence-based approach to application of principles of regenerative medicine in managing chronic pain of spinal, neurological and musculoskeletal origins. Essentials of Interventional Cancer Pain Management Amitabh

Gulati, Vinay Puttanniah, Brian M. Bruel, William S. Rosenberg, Joseph C. Hung, 2018-12-28. This text provides a comprehensive review and expertise on various interventional cancer pain procedures. The first part of the text addresses the lack of consistency seen in the literature regarding interventional treatment options for specific cancer pain syndromes. Initially, it discusses primary cancer and treatment-related cancer pain syndromes that physicians may encounter when managing cancer patients. The implementation of paradigms that can be used in treating specific groups of cancer such as breast cancer follows. The remainder of the text delves into a more common approach to addressing interventional cancer pain medicine. After discussing interventional options that are commonly employed by physicians, the text investigates how surgeons may address some of the more severe pain syndromes and covers the most important interventional available for our patients: intrathecal drug delivery. Chapters also cover radiologic options in targeted neurolysis and ablative techniques specifically for bone metastasis, rehabilitation to address patients' quality of life and function, and integrative and psychological therapies. Essentials of Interventional Cancer Pain Management globally assesses and addresses patients' needs.
